

UNIT - 1 :

- Introduction :
 - Definition - Software
 - Types of Software Products
 - Characteristics of a good software
 - Definition - Software Engineering (SE)
 - Types of applications
 - SE Ethics
- SDLC :
 - All Phases
 - Diagrams
- Software Process Models (Phases + Adv./Disadv. + Diagrams)
[EITHER : ANY ONE OR ONE LINE ON ALL 5] :
 - Waterfall
 - Incremental
 - Prototyping
 - Spiral
 - Rational Unified Process (RUP)
- Agile Software Development :
 - What ?
 - Values
 - Why ?
 - Vs Waterfall (Difference)
 - Principles - 12
 - Plan Driven Techniques
- Extreme Programming (XP) [Diagrams] :
 - XP Values
 - XP Process (4)

UNIT - 1 :

- Requirements Engineering :
 - What ?
 - 7 tasks (Definition + Example)
- SRS Document :
 - 6 Points
- Functional & Non-Functional Requirements (Maybe Case Studies)
- Understanding Requirements :
 - Establishing the ground work - 4 Points :
 - Identifying Stakeholders
 - Recognizing Multiple Viewpoints
 - Working towards Collaboration
 - Asking the Questions
- Eliciting Requirements - 4 Points :
 - Collaborative Requirement Gathering
 - Quality Function Deployment (QFD) :
 - Normal Requirements
 - Expected Requirements
 - Exciting Requirements
 - User (Usage) Scenarios
 - Elicitation Work Products
- Developing Use Cases :
 - Steps
 - Components
 - Examples
- Data Flow Modeling :
 - Notations
 - Meanings
 - Creating - Guidelines, Rules and Tips
 - Level-0 DFD (Examples)
 - Level-1 DFD (Examples)
