UQ24CA241A- Content Management Systems

Course Overview- CMS

P Sreenivas

Department of Computer Applications

Content Management Systems

Course Objectives

The objectives of the course is to

- ☐ Understand the basics of Content Management Systems and explore various kinds of cms's.
- ☐ Explore the usage of Drupal Modules for creating and managing sites content.
- ☐ Understand the site management through views and displaying the content.
- ☐ Explore the creation of custom pages, working with forms and plugins

Content Management Systems

Course Outcomes

At the end of the course, the student will be able to

- ☐ Identify the components of Content Management System and create web page using wordpress.
- ☐ Create content for web sites using Drupal and manage site navigation.
- ☐ Design and edit themes for web pages in Drupal, create views and display the content using different layouts
- ☐ Create the websites through custom pages, work with Form API to create forms and use different plugins to create layouts

Content Management Systems

Course Introduction/Course Overview

A CMS is a program that helps in maintaining, controlling, changing and reassembling the content on a webpage.

It manages the integrity, revisions, and lifecycle of information that is specifically destined for the web.

This course deals with different web content management systems and gives a basic understanding of their working from content creation to publishing. The two major tools used are Wordpress and Drupal for creating and managing content for the websites.

Content Management Systems

Unit-wise Contents

Unit-1 : Content Management Systems and Wordpress

The main topics include

Introduction, Features of Content Management Systems,
Advantages and Disadvantages of CMS,
Types of CMSs and its application in real world,
Introduction to WordPress and Installation,
Directory File Structure, Custom theme development and
plugins,
Working with pages, blogs, posts, categories, media,
User roles and responsibilities, Modifying Settings

Unit-2 : Content Building using Drupal

The main topics include

Technical requirements for installing Drupal, Installation of Drupal,

Creating Drupal website with basic requirements

Adding and managing a module, theme extensions,

Adding themes to websites, Deploying Drupal website,

Configuring your WYSIWYG editor, Custom fields with custom type content,

Menus and Linking content, Building Landing pages

Unit-3 : Custom Configuration on Blogs

The main topics include

Introduction to blogging, creation of blog landing page,
Block of recent blogs, Exposing filters and sorts to users for
control listings,
Adding related data in view with relationships,
Displaying charts using views, Creating and displaying charts
using views,
Creating a module and providing configuration settings for
module, Defining and checking user permissions,
Creating a event subscriber

Content Management Systems

Unit-wise Contents

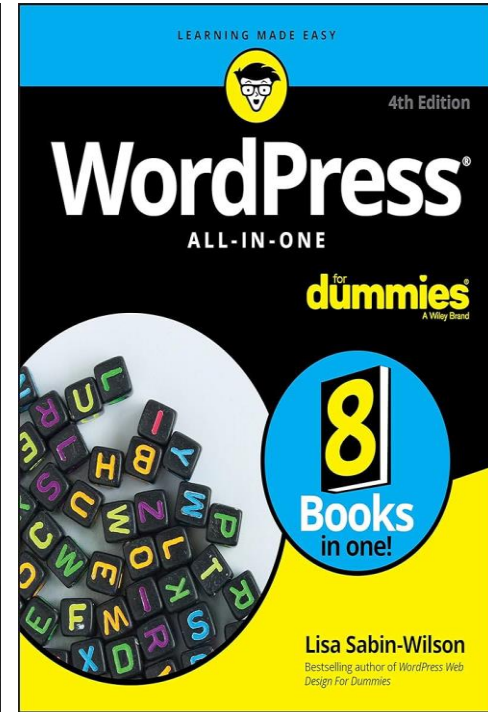

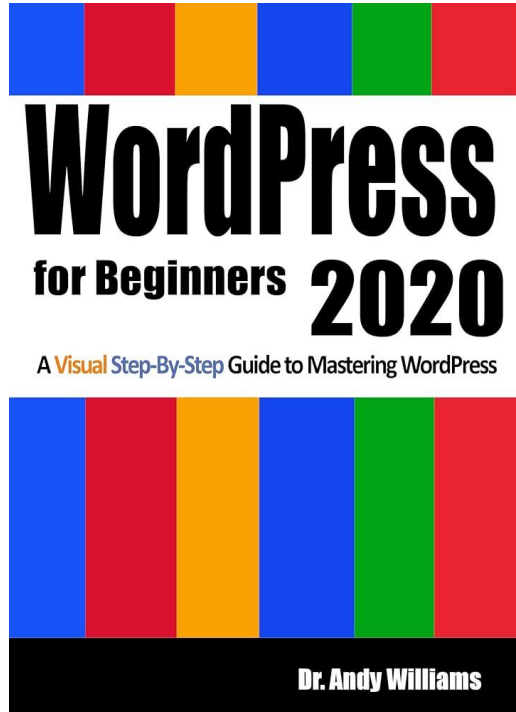

Unit-4 : Dynamic API and plugins

The main topics include

Creation of Dynamic redirect page, Creation of JSON response,
Creation of custom forms, Saving configuration data,
Validating form data and specifying conditional form elements,
Customizing existing forms in Drupal,
Input Sanitization, Creation of blocks using plugins,
Custom field and Custom field formatter,
Custom field widget and Custom field plugin type,
Form creation using API and adding plugins,

Content Management Systems

Text Books/Reference Books

Content Management Systems

Introduction to CMS, Features and Types

Tamal Dey

Department of Computer Applications

Content Management Systems

CMS or Web CMS– What is it?

- The Content Management System (CMS) is a software which stores all the data such as text, photos, music, documents, etc. and is made available on your website.
- It helps in editing, publishing and modifying the content of the website
- WordPress was initially released on 27th May, 2003 by Matt Mullenweg and Mike Little. WordPress was announced as open source in October 2009.

CMS : https://www.youtube.com/watch?v=-Uor3l0n_vQ

Content Management Systems

Before CMS- A little bit history

- ❑ In the early days, websites were hand-built using a code called Hypertext Markup Language, or HTML for short.
- ❑ To create good-looking websites, you needed to have tools like Macromedia Dreamweaver (now owned by Adobe) and Microsoft FrontPage (discontinued in 2006), but these tools were expensive.
- ❑ In May 2003, Matt Mullenweg & Mike Little released a tool that would change the face of website building forever. The tool is called as WordPress.

Content Management Systems

Before CMS- A little bit history

- ❑ Fast-forward to today, and WordPress is now the site-building tool of choice for many professionals and enthusiasts alike.
- ❑ It's extremely powerful, flexible, produces very professional looking websites or blogs, is relatively easy to use, and perhaps best of all, it's free.

Content Management Systems

How does CMS work???

- ❑ A CMS provides a graphical user interface with tools to create websites, and to edit and publish web content without the need to write code from scratch.
- ❑ A CMS has two components: a content management application (CMA) and a content delivery application (CDA).

Content Management Systems

How does CMS work???

- ❑ The CMA is a graphical user interface that lets users design, create, modify and remove content from a website without the need for Hypertext Markup Language ([HTML](#)) knowledge.
- ❑ The CDA component provides the back-end services that support management and delivery of the content once a user creates it in the CMA.

Content Management Systems

CMS/EMC/WCMS

CMS vs. EMC vs. WCMS

Content management system (CMS)	Enterprise content management (ECM)	Web content management system (WCMS)
Manages structured content most effectively	Manages unstructured information	Manages multiple types of content
Simplifies content creation for nontechnical users	Focuses on content production	Externally oriented
Provides features to create, manage and modify digital content	Content delivery is done through apps	Supports content delivery for customer-facing engagement
Handles content creation and publication	Supports workflow and content categorization capabilities	Includes multiple content delivery capabilities
Offers a content management application and a content delivery application	Stores digital files in nested folders	Morphs into digital experience management

Content Management Systems

CMS Features

Features can vary among the various CMS software offerings, but core functions include the following:

- ❑ **Intuitive indexing, search and retrieval.** These features index all data for easy access through search functions and let users search by attributes such as publication dates, keywords or author.
- ❑ **Format management.** This helps turn scanned paper documents and legacy electronic documents into HTML or PDF documents.

Content Management Systems

CMS Features

- ❖ **Revision features.** These features let users update and edit content after initial publication. Revision control also tracks any changes users make to files.
- ❖ **Publishing and content creation.** This functionality lets individuals use a template or a set of templates that an organization approves -- as well as wizards and other tools -- for content creation and modification.

Content Management Systems

CMS Features

- ❖ A CMS can also provide tools for personalization, or one-to-one marketing.
- ❖ One-to-one marketing is the ability of a website to tailor its content and advertising to a user's specific characteristics using information a user provides or a website gathers.
- ❖ For example, if a user searches for digital cameras in major search engines -- such as Google -- advertising banners might feature businesses that sell digital cameras instead of businesses that sell gardening products.

Content Management Systems

CMS Features

Other CMS features include the following:

- URLs designed to help search engine optimization ([SEO](#)-friendly URLs).
- Integrated and online help, including discussion boards.
- Tools for team-based collaboration among content creators and for document management.
- Group-based permission systems and security.
- Workflows for content creator, editor and administrative roles to streamline security and permissions.
- Full template support and customizable templates.
- Easy wizard-based installation and versioning procedures.
- Admin panel with support for multiple languages.

Content Management Systems

Benefits of CMS

Ease of use: A graphical user interface makes it easy for even those with limited technical knowledge to use the software.

Low cost of entry: Some CMS platforms are free while others charge a monthly fee, but all require little or no high-end IT skills to implement, lowering the cost of website deployment considerably.

Easy to search for information. A built-in search function lets users enter what they're searching for and returns a list of items -- much like a Google search engine.

Content Management Systems

Benefits of CMS

Easy to manage content. Not only is creating content easy, but so is removing content. A CMS makes it easy to unpublish content to keep websites current.

Accessible from anywhere. A CMS can be cloud-based or on-premises, but users can access content from anywhere with a device that's connected to the internet.

Allows multiple users. A CMS makes it easy to manage publishing permissions.

Content Management Systems

Benefits of CMS

Easy to scale. A CMS makes it easy for organizations to add new web pages as their business grows without the need for a developer.

Easy to update. Development teams can roll out updates with just a few clicks.

Content Management Systems

Types of CMS's

Component Content Management Systems (CCMS)

Component Content Management System (CCMS) is different from a regular CMS because it organizes content at the granular level. Specifically, instead of handling material page-by-page, it collects words, phrases, paragraphs, or images ("components") and keeps them in a single storage.

Components are only kept once to maximize content reuse. The CCMS is a constant source for information distribution across numerous devices, including mobile, PDF, and print.

Component Content Management Systems examples: Xyleme, Paligo, Documentum.

Content Management Systems

Types of CMS's

Enterprise Content Management Systems (ECM)

Enterprise Content Management (ECM) is a CMS system that enables businesses to create, manage, and distribute numerous forms of content. It also guarantees that information and documents are sent to the most qualified audience: an employee, executive, business partner or customer, depending on your objectives.

Employees can easily retrieve the stored content needed to fulfill their daily duties with ECM. Also, an ECM system deletes files automatically after the retention term to free up superfluous occupied space.

Enterprise Content Management examples: DocuShare, Zoho Docs and eFileCabinet.

Content Management Systems

Types of CMS's

Web Content Management Systems (WCMS)

With Web Content Management systems, users can manage digital components of a website without prior knowledge of markup languages or web programming.

A WCMS facilitates digital content and [website management](#) by providing collaboration, authoring, and administration tools. Unlike most other CMSs that handle both print and web content, a WCMS just handles online content.

Web Content Management System examples: Hubspot, WordPress, Webflow, and Duda.

Content Management Systems

Types of CMS's

Digital Asset Management Systems (DAM)

A Digital Asset Management system (DAM) allows you to produce, manage, store, organize and distribute digital assets. A cloud-based DAM is a centralized library that allows an employee, client or contractor to access content conveniently from any location.

DAM was initially only used to store media data such as images, movies and audio recordings. These systems now support various formats, including logos, fonts, papers, and more.

Digital Asset Management systems examples: MediaValet, Brainfolder and Bynder.

Content Management Systems

Types of CMS's

Document Management Systems (DMS)

A document management system (DMS) is a cloud-based solution for managing, storing, and tracking documents that make paper-based file tracking obsolete. It offers an automated solution for uploading, processing, and distributing business documents, eliminating the need for printing, copying, or scanning.

Document Management Systems examples: Google Workspace, Dropbox, OneDrive, and iCloud.

Content Management Systems

Basics of Blogging, Comparison with other web technologies

P.Sreenivas

Department of Computer Applications

Introduction to Blogging

- ❑ Blogging deals with the regular sharing of information in the form of blogs on the internet. Understanding the blog concept is essential to get an insight into blogging.

src: [Introduction to Blogging – Documentation – WordPress.org](#)

What is a Blog?

- ❑ A “blog” is an updated version of the old term “weblog,” used to describe websites that maintain an ongoing chronicle of information.
- ❑ A blog features diary-type commentary and links to articles on other websites, usually presented as a list of entries in reverse chronological order.
- ❑ Blogs range from personal to political and can focus on one narrow subject or a whole range of subjects.

Content Management Systems

Basics of Blogging

- ❑ Many blogs focus on web design, home staging, sports, mobile technology, etc. Few are more eclectic, presenting links to all types of other sites.
- ❑ And others are more like personal journals, presenting the author's daily life and thoughts.

Content Management Systems

Basics of Blogging

Blogs tend to have a few things in common:

- ❖ A main content area with articles listed chronologically, the newest on top. Often, the articles are organized into categories—an archive of older articles.
- ❖ A way for people to leave comments about the articles.
- ❖ A list of links to other related sites is sometimes called a “blogroll.”
- ❖ One or more “[feeds](#)” like RSS, Atom, or RDF files.

Content Management Systems

Basics of Blogging

What is a Blogger?

- ❖ A blogger is a person who owns, runs, or maintains a blog.
- ❖ That is, posting articles or new posts, information, and sharing the most up-to-date news, opinions, and case studies, to name but a few.

Content Management Systems

Basics of Blogging

What can be Blog Content?

- ❖ Content has a central importance in any website.
- ❖ The nature of content depends on the type of business.
- ❖ Retail sites feature a catalog of products. University sites contain information about their campuses, curriculum, and faculty. News sites show the latest news stories.

Content Management Systems

Basics of Blogging

A blogger should update the content regularly. You might have a bunch of observations or reviews for a personal blog.

Without updated content, there is little reason to visit a website more than once.

Some blogs have a single author, and some have multiple authors.

Each author writes his/her own articles. Typically, blog authors compose their articles in a web-based interface built into the blogging system.

Some blogging systems also support using [stand-alone “weblog client” software](#), allowing authors to write articles offline and upload them later.

Content Management Systems

Comparison of other webtechnologies

WordPress, as a Content Management System (CMS), is frequently compared to various other web technologies, each with its own strengths and weaknesses depending on project needs.

Comparison with other CMS platforms/ Web technologies:

Ease of use: WordPress is generally considered the most user-friendly, particularly for beginners, due to its intuitive interface and extensive community support.

Extensibility: WordPress boasts the largest ecosystem of plugins and themes, providing vast options for functionality and design.

Content Management Systems

Comparison of other webtechnologies

Community Support:

WordPress has the largest and most active community, leading to abundant resources, tutorials, and readily available help.

Comparison with website builders like Wix, Squarespace and other Google sites:

Customization & Control:

WordPress provides significantly more control and flexibility over design, functionality, and hosting, making it suitable for complex or highly customized projects. Website builders offer a simpler, drag-and-drop experience, ideal for beginners or small websites with less demanding customization needs.

Scalability:

WordPress is highly scalable, supporting everything from personal blogs to large-scale e-commerce sites. Website builders can be limiting in terms of scalability and advanced features.

Content Management Systems

WordPress – Introduction, Features, Advantages and Disadvantages

P.Sreenivas

Department of Computer Applications

Content Management Systems

WordPress

- ❑ WordPress is a Content Management System (CMS). That just means it is a piece of software that can help you manage and organize your content into an impressive and coherent website.
- ❑ WordPress was created as a blogging tool, but it has become so much more than that over the years.

Content Management Systems

WordPress

- WordPress powers simple blogs, corporate websites, and everything in between. Companies like Sony, the Wall Street Journal, Samsung, New York Times, Wired, CNN, Forbes, Reuters, and many others all use WordPress as part of their online presence.
- WordPress is open source, meaning that all of its code is free to view, use, and customize.

Content Management Systems

Some of the Features That Make WordPress Great

- The template system for site design means that changing your site's look and feel is as simple as installing a new theme with just a few clicks of the mouse.
- Plugins are pieces of code that you can download into your WordPress site to add new features and functions. There are tens of thousands of plugins available, and many are free.
- Once your site is set up, you can concentrate on adding great content to your site. You simply build your page in the WordPress Dashboard, hit publish, and WordPress takes care of the rest.

Content Management Systems

Some of the Features That Make WordPress Great

- WordPress has a feature called Widgets that allows the user to drag and drop “features” into their site. For example, you could add a visitor poll to your site’s sidebar using a widget. Widgets are typically used in the sidebars and footers, but some templates allow widgets to be placed in other well chosen areas of the design.
- WordPress can help you with the SEO (Search Engine Optimization) of your site so that it has the potential to rank higher in search engines like Google and Bing.
- WordPress can be used to develop any type of website

Content Management Systems

Advantages and Disadvantages of WordPress

Advantages

1. It's a open source platform and available for free
2. Many Plugins and templates are available for free
3. Content can be edited easily
4. Media files can be uploaded easily and quickly
5. It offers several SEO tools

Content Management Systems

Advantages and Disadvantages of WordPress

Disadvantages

1. Using several plugins can make the website heavy to load and run
2. PHP knowledge is required whenever the site needs to be updated
3. Software needs to be up-to-date to keep WordPress software up to date
4. Modifying and formatting graphic images and tables is difficult

Content Management Systems

Advantages and Disadvantages of WordPress

WordPress.com vs WordPress.org

There are two “flavors” of WordPress. These are commonly referred to as WordPress.com and WordPress.org.

These names refer to the website where that particular version of WordPress is available. They are both WordPress, from the same company, but they target different user groups, so they look and behave a little differently.

Content Management Systems

Wordpress.org vs Wordpress.com

	<u>WordPress.org</u> / Self-hosted	<u>WordPress.com</u>
Cost	Download the software for free but pay for the domain and web hosting every year.	Launch your website for free, or upgrade to a paid plan for access to additional features.
Installation	You must find a host yourself to handle your site's security, backups, and maintenance.	Hosting is built-in. Upgrades are available for advanced features, security, backups, and more.
Experience Needed	Customization, site maintenance, configuration, and updates on your self-hosted site require intermediate technical knowledge.	Beginner-friendly but also packed with all the power that advanced users require. WordPress.com is an all-in-one, website builder that will grow with you.
Functionality	Custom plugins are widely available on your self-hosted site, but compatibility issues can cause plugins to stop working properly whenever there's an update.	Several built-in features eliminate the need for many plugins. Eligible plans allow plugins to be installed, and updates are managed for you.

Content Management Systems

Wordpress.org vs Wordpress.com

WordPress.org / Self-hosted

Themes

Install custom themes on your self-hosted site or build your own.

SEO

Plugins installed on your self-hosted site can be used to enhance SEO, but they require extra maintenance, installation, and time.

Analytics

Analytics are available through self-hosted plugin integrations or connecting to Google Analytics.

WordPress.com

A wide range of included themes with vast customization options. With an eligible plan, access advanced customization options or install custom themes.

WordPress.com is SEO-friendly right out of the box. With an eligible plan, SEO plugins are also available but not necessary.

Built-in stats are great for beginners and help to gauge your site performance. Sites with an eligible plan can also connect to Google Analytics, or integrate with other tools.

THANK YOU

Content Management Systems

WordPress – Installation

P.Sreenivas

Department of Computer Applications

Content Management Systems

System Requirements

- ☐ Database – MySQL 5.0+
- ☐ Web Server
 - WAMP (Windows)
 - LAMP (Linux)
 - XAMPP (Multi-platform)
 - MAMP (Macintosh)
- ☐ Operating System – Cross Platform
- ☐ Browser Support – All browser support
- ☐ PHP compatibility – PHP 5.2+

Content Management Systems

System Requirements

Installing WordPress on local server

WordPress can be installed using local servers like XAMPP, WAMPP, etc.

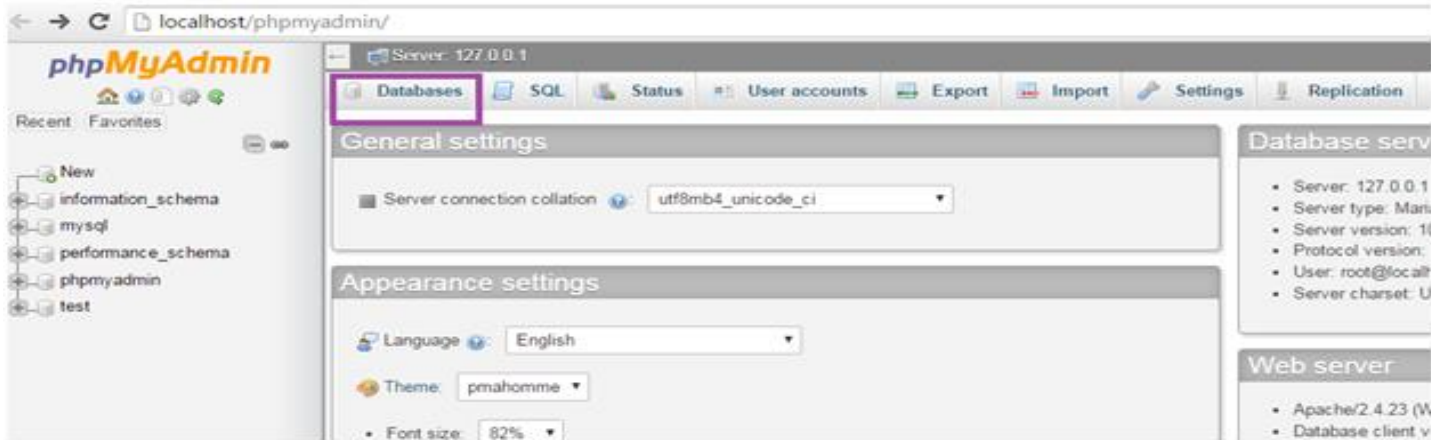

We have XAMPP server installed in our system.

Content Management Systems

System Requirements

Creating Database

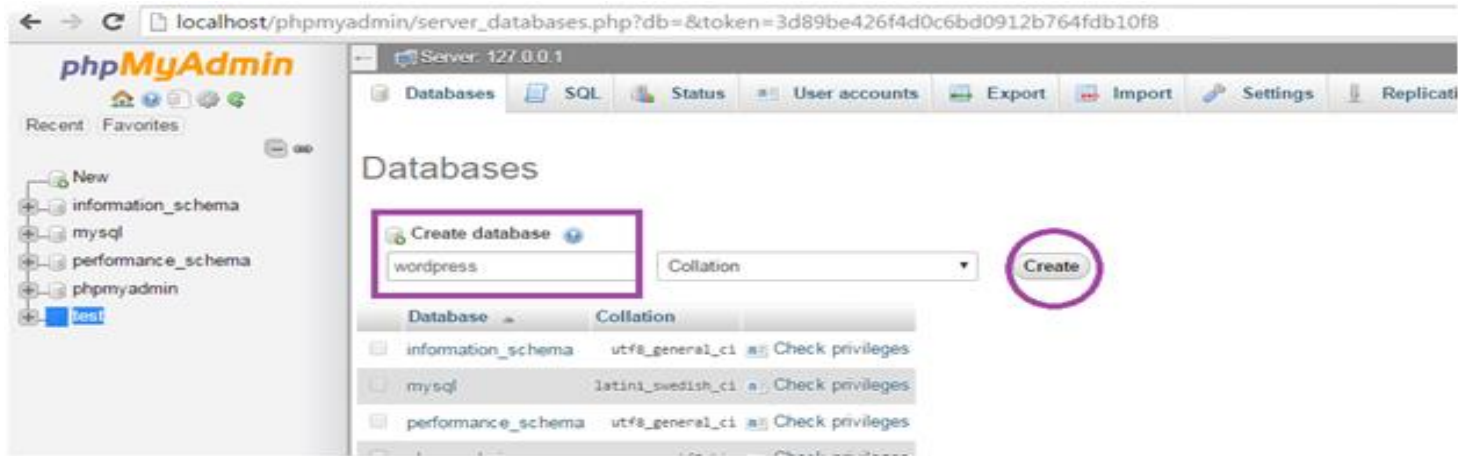

Open **phpmyadmin** from the XAMPP server control panel.
Here, at the top you can see option **Databases**. Select it.

Look at the above snapshot, click on the **Databases** above to create a database.
You'll be directed to the next window.

Content Management Systems

System Requirements

Look at the above snapshot, you have to create a database to connect with your WordPress. You can name it anything. Here, we have named it as **wordpress**. Write the database name and click on **Create**.

Content Management Systems

System Requirements

Download and Install WordPress

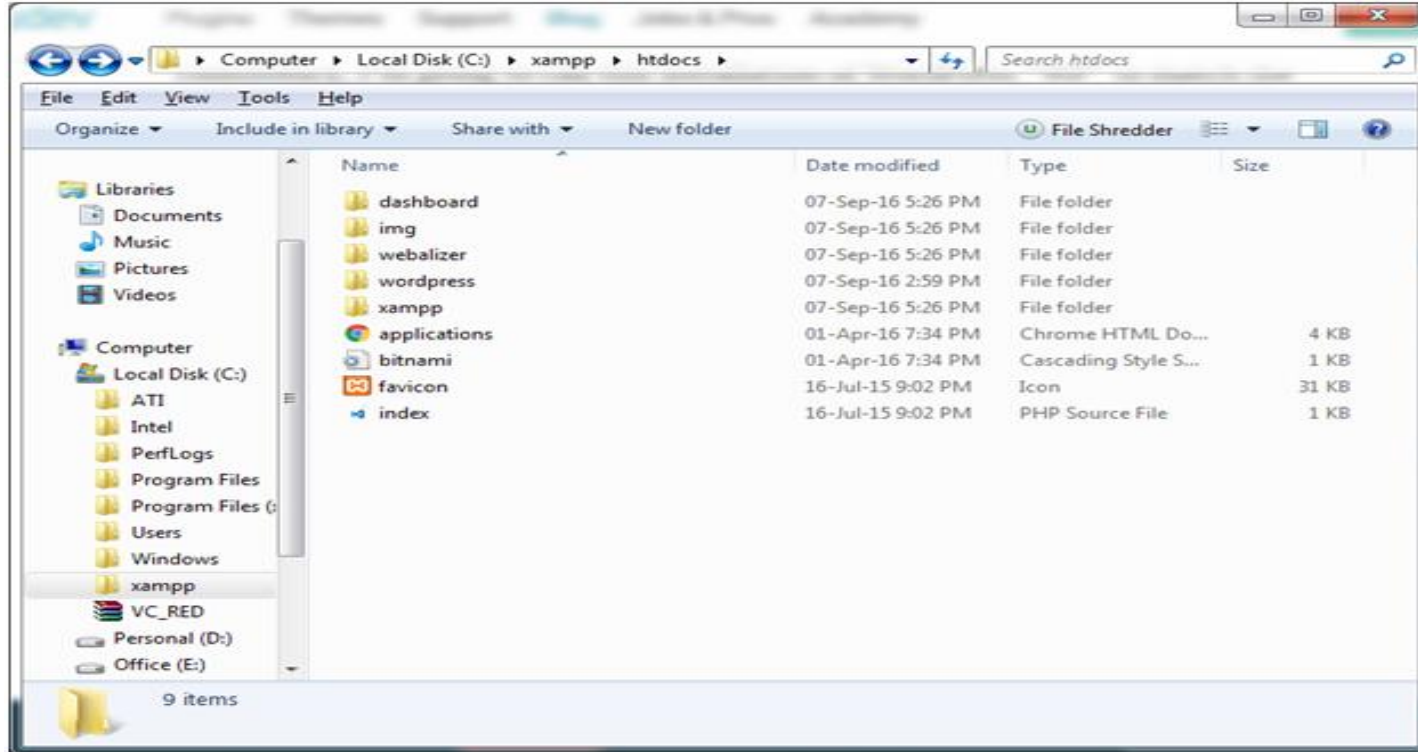

First you have to download the latest version of WordPress from the official WordPress site **www.wordpress.org** in your system.

WordPress will be downloaded in zipped format. This WordPress zipped folder has to be placed in XAMPP folder **C:/xampp/htdocs**

Unzip the WordPress folder here and name it anything. Here, we have named it as wordpress.

Content Management Systems

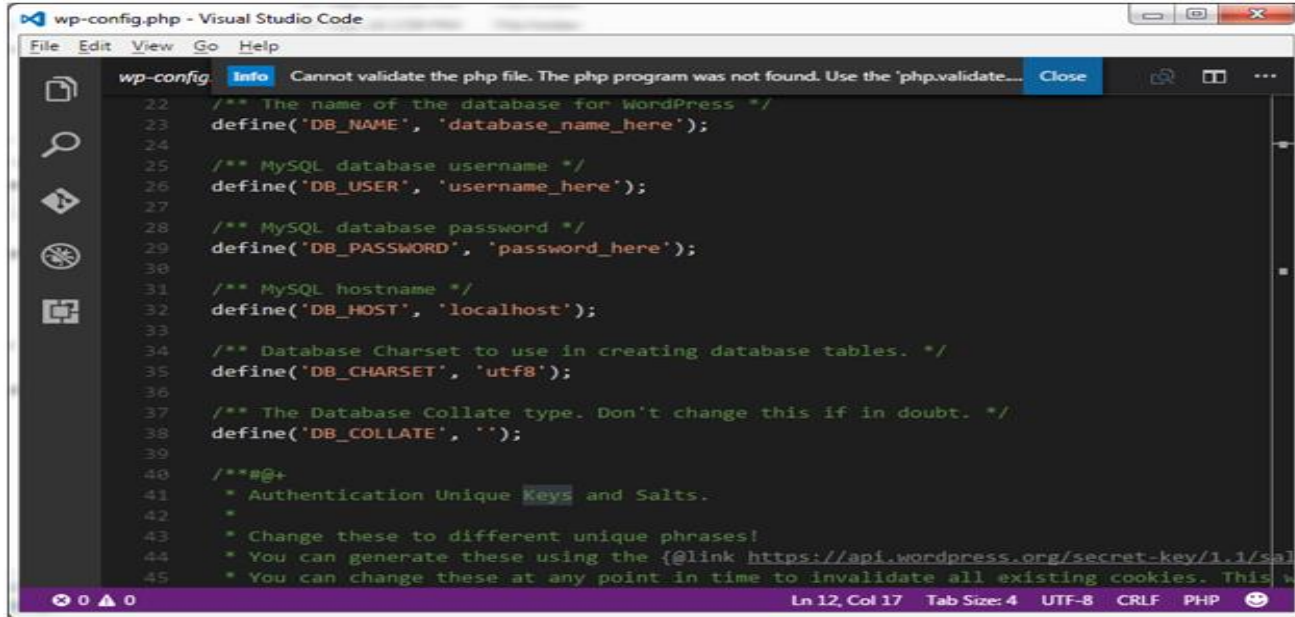

System Requirements

Content Management Systems

System Requirements

Open the created wordpress folder. In the folder, find the file **wp-config-sample.php** file and rename it as **wp-config.php** file. Scroll down the file until line number 23 as shown in the below snapshot.

```
wp-config.php - Visual Studio Code
File Edit View Go Help
wp-config: info Cannot validate the php file. The php program was not found. Use the 'php.validate...' Close
22 /** The name of the database for WordPress */
23 define('DB_NAME', 'database_name_here');
24
25 /** MySQL database username */
26 define('DB_USER', 'username_here');
27
28 /** MySQL database password */
29 define('DB_PASSWORD', 'password_here');
30
31 /** MySQL hostname */
32 define('DB_HOST', 'localhost');
33
34 /** Database Charset to use in creating database tables. */
35 define('DB_CHARSET', 'utf8');
36
37 /** The Database Collate type. Don't change this if in doubt. */
38 define('DB_COLLATE', '');
39
40 /**#@+
41  * Authentication Unique Keys and Salts.
42  *
43  * Change these to different unique phrases!
44  * You can generate these using the {@link https://api.wordpress.org/secret-key/1.1/salt}
45  * You can change these at any point in time to invalidate all existing cookies. This
```

Content Management Systems

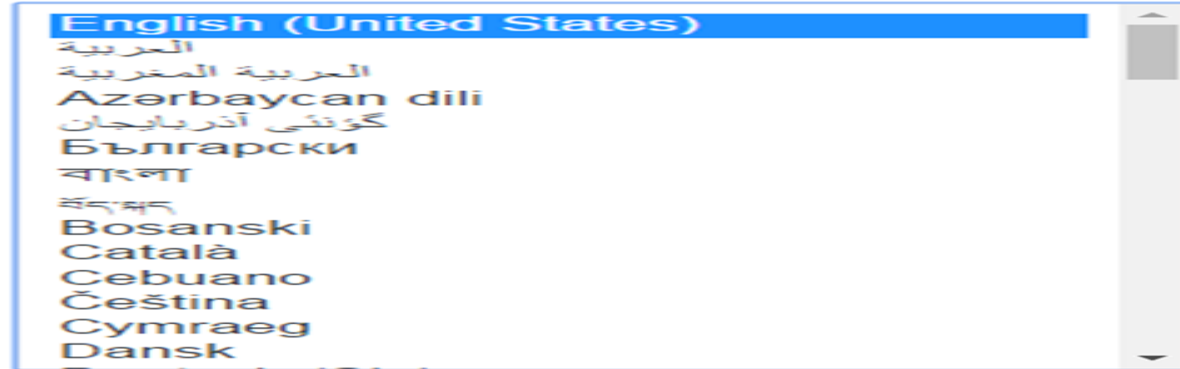

System Requirements

These lines define the login credentials for your database.

- ❖ Replace "database_name_here" with your database name. In our case it is "wordpress".
- ❖ Replace "username_here" with your "root".
- ❖ "password_here" field will remain blank.
- ❖ Save and close the file.
- ❖ Now, open your browser and go to **<http://localhost/wordpress/>**
- ❖ Here, wordpress is the folder name of unzipped WordPress file.

Content Management Systems

System Requirements

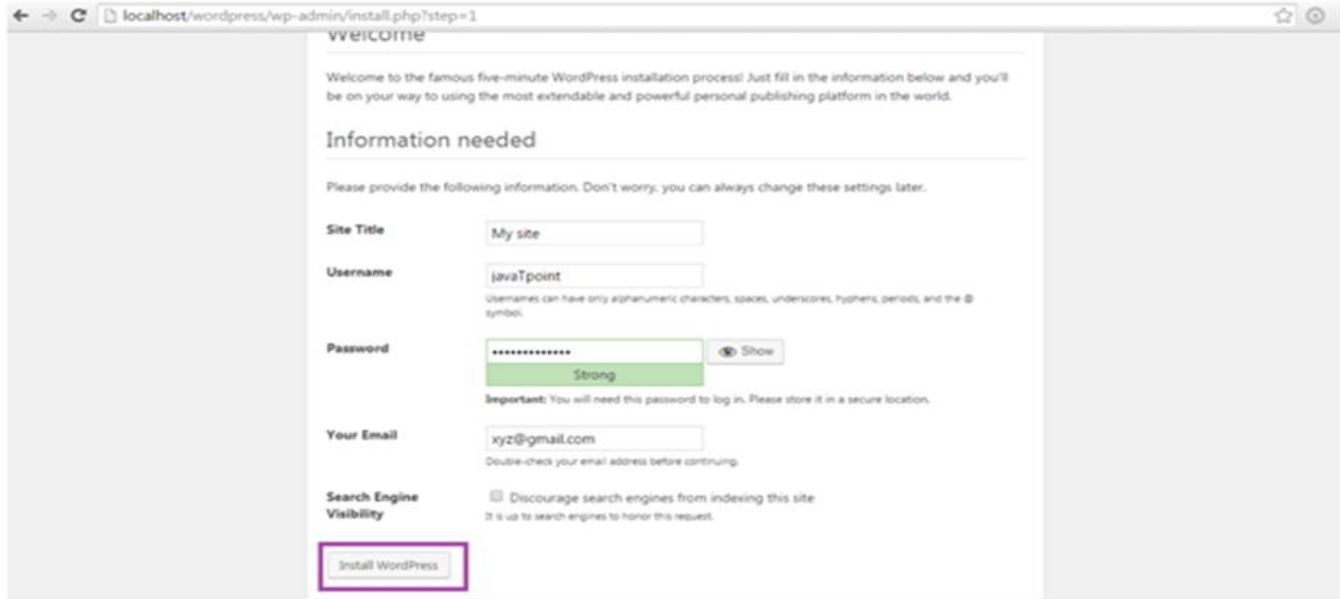

Continue

Look at the above snapshot, select your language and click the **Continue** button.
You'll be directed to the following page.

Content Management Systems

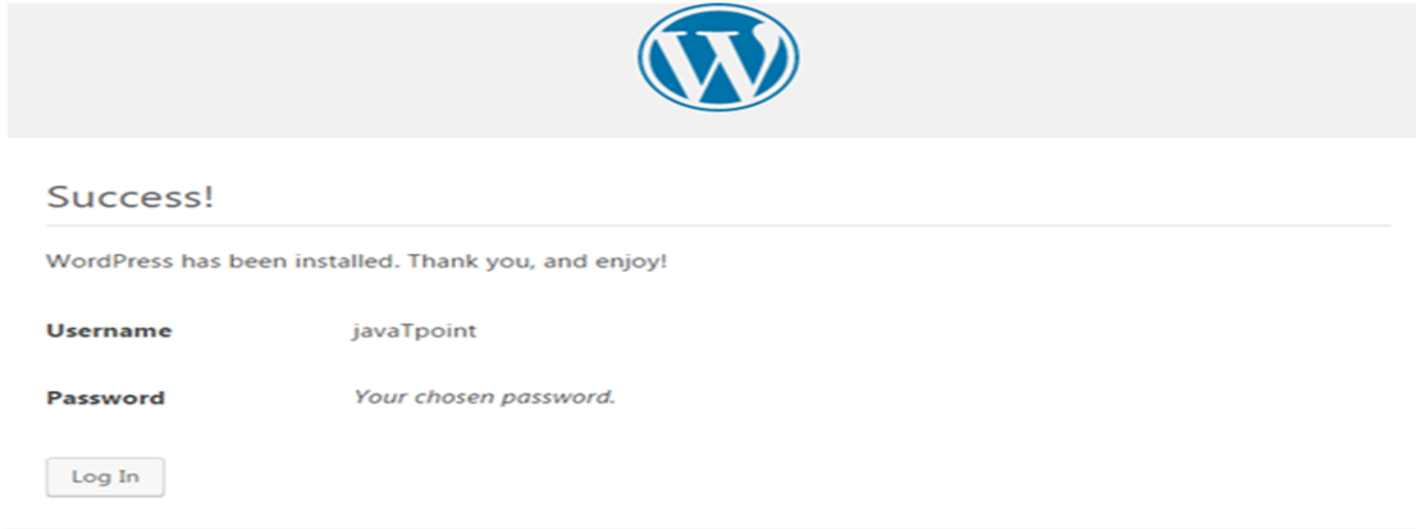

System Requirements

Look at the above snapshot, you have to fill all the details in the fields above and then click Install button. That's all, you have installed WordPress.

Content Management Systems

System Requirements

If all the above processes are done correctly then you'll be successfully logged in the WordPress as shown in the above snapshot.

THANK YOU

Content Management Systems

WordPress – Directory Structure

P.Sreenivas

Department of Computer Applications

Content Management Systems

Cost of owning a site

As you build your site, there will be optional costs – things like a website theme, auto responder, or mailing list, but these are optional since most things can be done for free. However, there are two costs that you cannot avoid.

Content Management Systems

Cost of owning a site

The Website Domain

The website domain is your site's address on the internet. Google.com is the website domain of our favorite search engine. CNN.com is the domain of a popular international news service.

You will need to buy a domain for your website.

Content Management Systems

Cost of owning a site

- Let's just consider the price.
- Typically, a domain name will cost around \$10 per year. You can sometimes get the first year for free when you buy web hosting, but once that first year is up, you'll be paying \$10 per year to keep your domain name alive.

Content Management Systems

Cost of owning a site

Your domain name will be registered with a company called a registrar.

It is the registrar that will collect the \$10 payment every year. The registrar can be the same company that you use for your web hosting or a different company.

Content Management Systems

Cost of owning a site

Website Hosting

Your website needs to be “hosted” on a special type of computer called a server. Servers are connected to the Internet 24/7.

We call the companies that lease or rent space out on these servers “web hosts.”

A web host’s job is to make sure their servers are up, running, and well maintained at all times.

Content Management Systems

Cost of owning a site

You want to create a website, you need to rent some disk space from a web host on one of these servers.

This is a monthly fee of \$3.99 - \$5.00 per month.

Content Management Systems

Cost of owning a site

The total essential costs of running your website are:

1. \$10 per year for the domain name.
2. \$5 per month for web hosting.

That's a total of around \$70 per year.

Content Management Systems

Domain Name

When you decide to put a website online, you will need a domain name.

The domain name is the “address” that identifies your site.

For example, the domain name of some site is ezseonews.com. If you type that into a web browser, you will be taken to that site.

Content Management Systems

Domain Name

The process goes a little like this:

1. Decide on the topic of your site.
2. Brainstorm some ideas for a domain name.
3. Check if your ideas are available.
4. Buy the domain.

Content Management Systems

Domain Name

Try to come up with some ideas for domain names.

Let's say:

ReduceYourCarbonFootprint.com

GreenHomeImprovements.com

EcoHomeEfficiency.com

EfficientGreenHome.com

Once you have a lot of ideas, it is time to check if any of them are available.

Content Management Systems

Domain Name

check .com, .net, and .co.uk versions of the site on search engine like Google

Content Management Systems

WordPress File and Directory structure

- ✓ It refers to the organization and arrangement of files and folders within a [WordPress installation](#).
- ✓ It shows where the different components of the WordPress system, like core files, themes, plugins, media uploads, and configuration files, are located.

Content Management Systems

WordPress File and Directory structure

- ✓ The file structure in WordPress plays a crucial role in how the CMS functions. It can also support how developers and site administrators operate their websites.
- ✓ A better understanding of WordPress files and directory structure allows users to locate specific files, make modifications, add custom code, [install themes](#), [install plugins](#), and manage site content effectively.

Content Management Systems

WordPress File and Directory structure

- ✓ By following a consistent structure, WordPress ensures that files are organized logically, making it easier to maintain and update the Content Management System.
- ✓ The structure also separates core files from site-specific content and facilitates upgrades without affecting customizations.

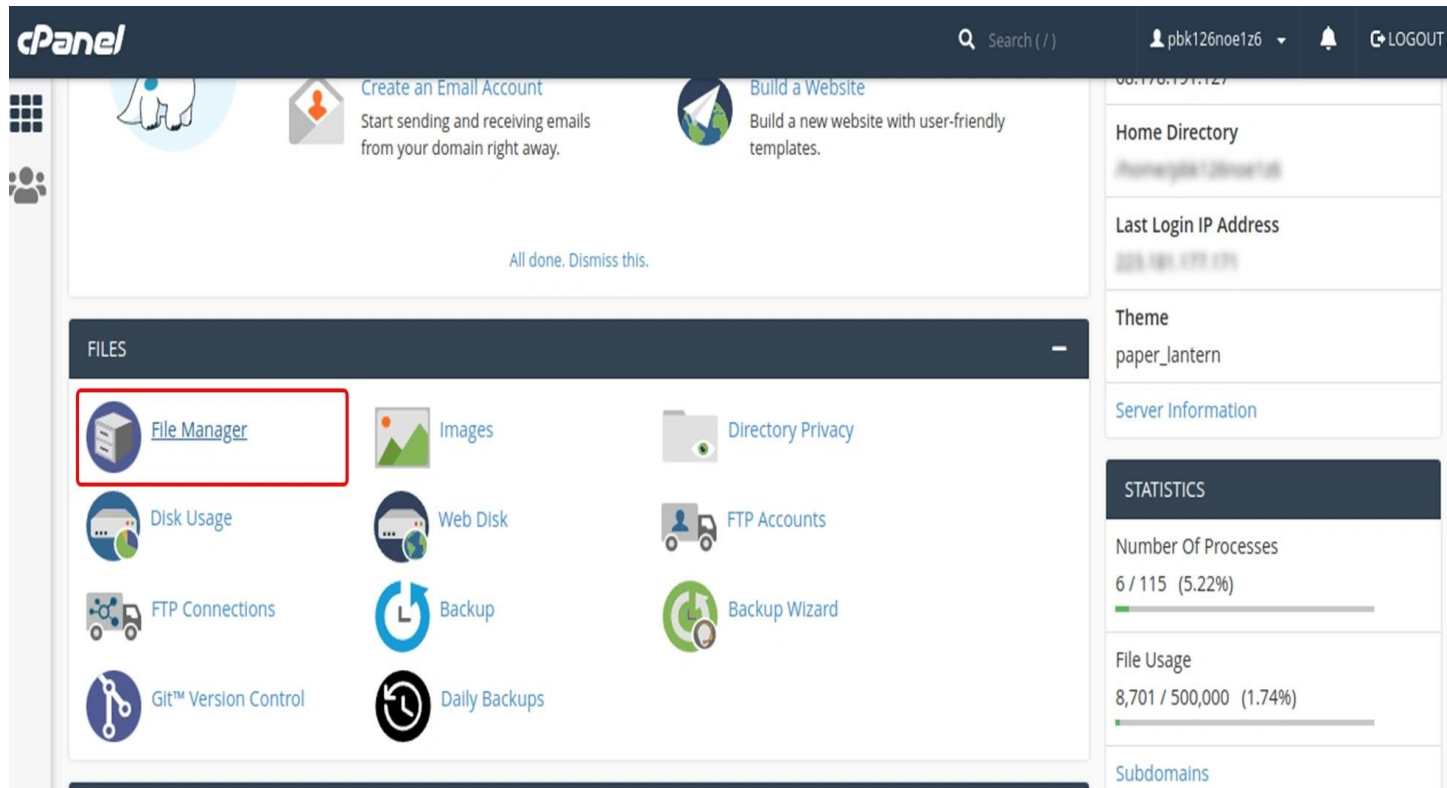

Content Management Systems

WordPress File and Directory structure

- ✓ WordPress files and directories are available on the web hosting server that you can access [using an FTP client](#).
- ✓ As an alternate approach, WordPress files and directories are also accessible through the file manager in the [WordPress control panel](#).

Content Management Systems

WordPress File and Directory structure

The image shows the cPanel interface. At the top, there's a dark blue header with the cPanel logo, a search bar, and user information (pbk126noe1z6). Below the header, there are two main sections. The left section contains a grid of icons for various services: 'Create an Email Account', 'Build a Website', 'Home Directory', 'Last Login IP Address', 'Theme', and 'Server Information'. The right section contains a 'FILES' tab and a 'STATISTICS' section. The 'FILES' tab is active, and the 'File Manager' icon is highlighted with a red rectangle. Other icons in the 'FILES' section include 'Disk Usage', 'Web Disk', 'FTP Accounts', 'FTP Connections', 'Backup', 'Backup Wizard', 'Git™ Version Control', and 'Daily Backups'. The 'STATISTICS' section shows 'Number Of Processes' (6 / 115 (5.22%)) and 'File Usage' (8,701 / 500,000 (1.74%)).

FILES

- File Manager** (highlighted)
- Disk Usage
- Web Disk
- FTP Accounts
- FTP Connections
- Backup
- Backup Wizard
- Git™ Version Control
- Daily Backups

Content Management Systems

Working with Pages

Add Text to your static home page

Don't touch blog page, it populates when you add posts.

Go to Pages>Add new.

Create Home page, About us, Contact us pages using Keywords

Copy and paste the required text to each page using Edit box.

Publish Pages

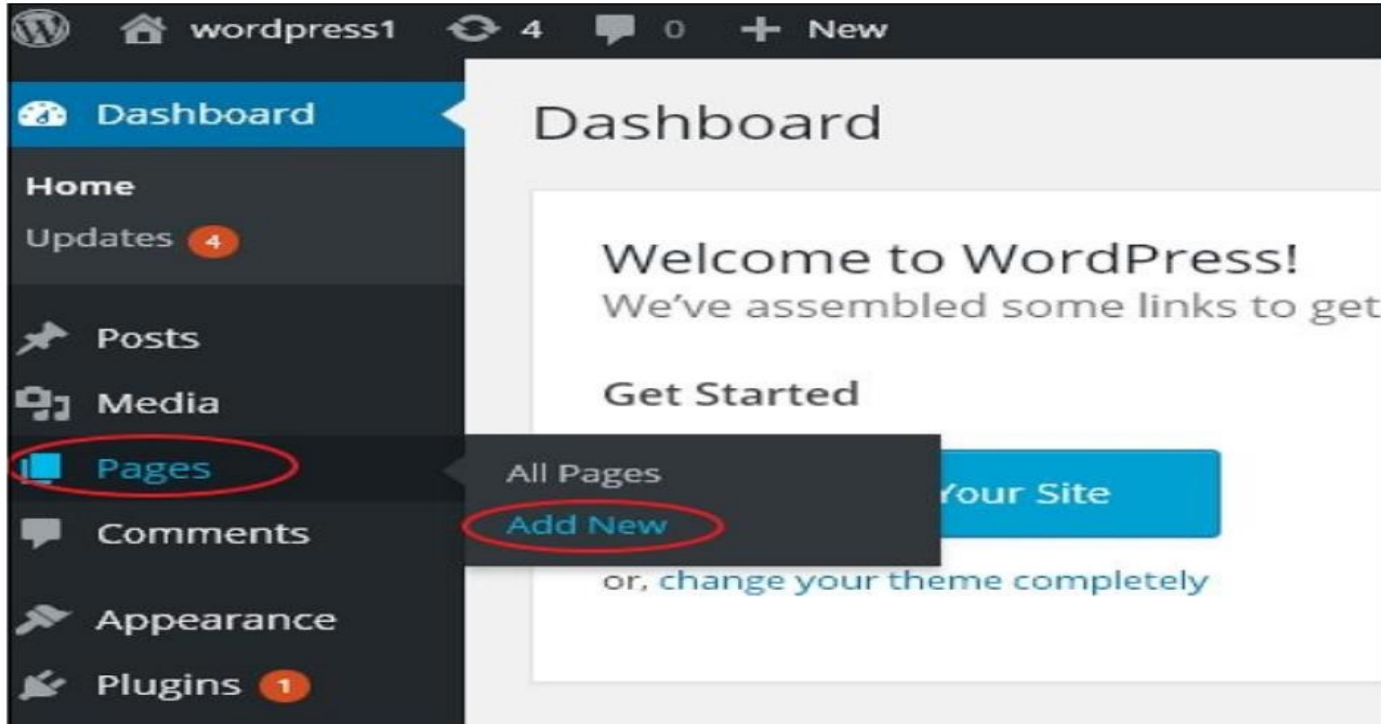

The command, “Publish” is used to make the pages available to all users wherein each user can view that particular page. Publishing a new page in WordPress is an easy process.

Following are the steps to Publish Pages in WordPress.

Step (1) – Click on Pages → Add New in WordPress.

Content Management Systems

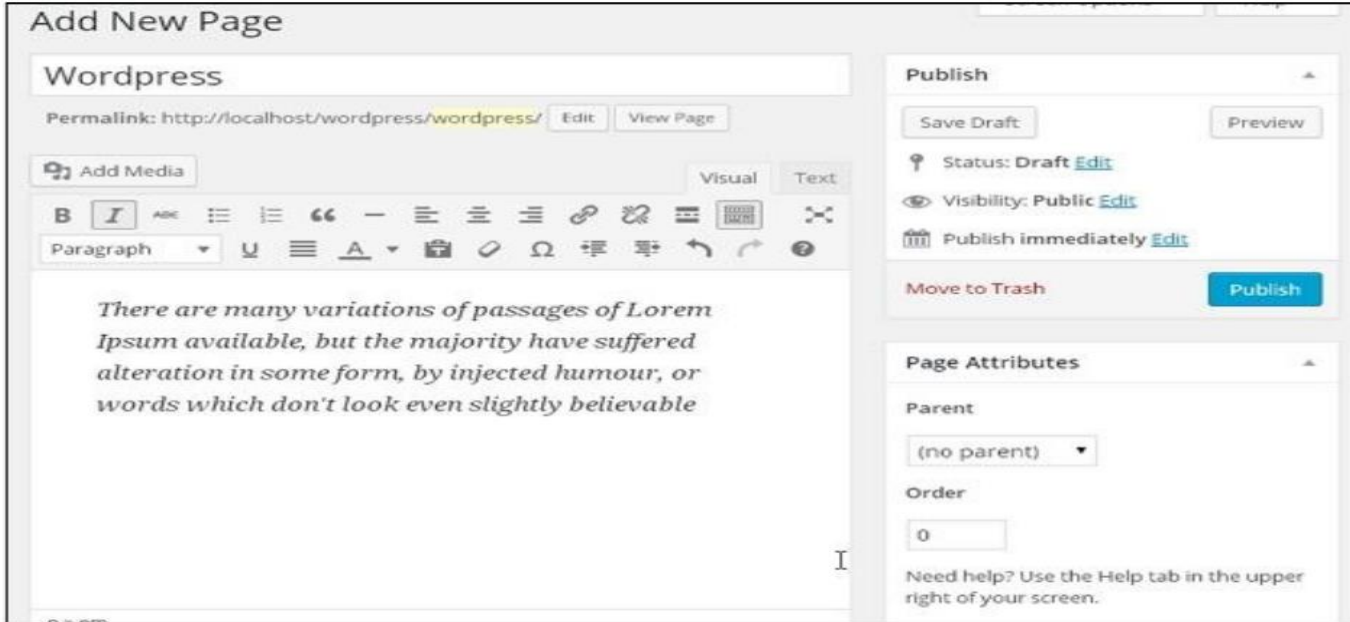

Working with Pages

Content Management Systems

Working with Pages

Step (2) – You will get the editor as shown in the following screenshot. You can use the WordPress WYSIWYG editor to add the actual content of your page.

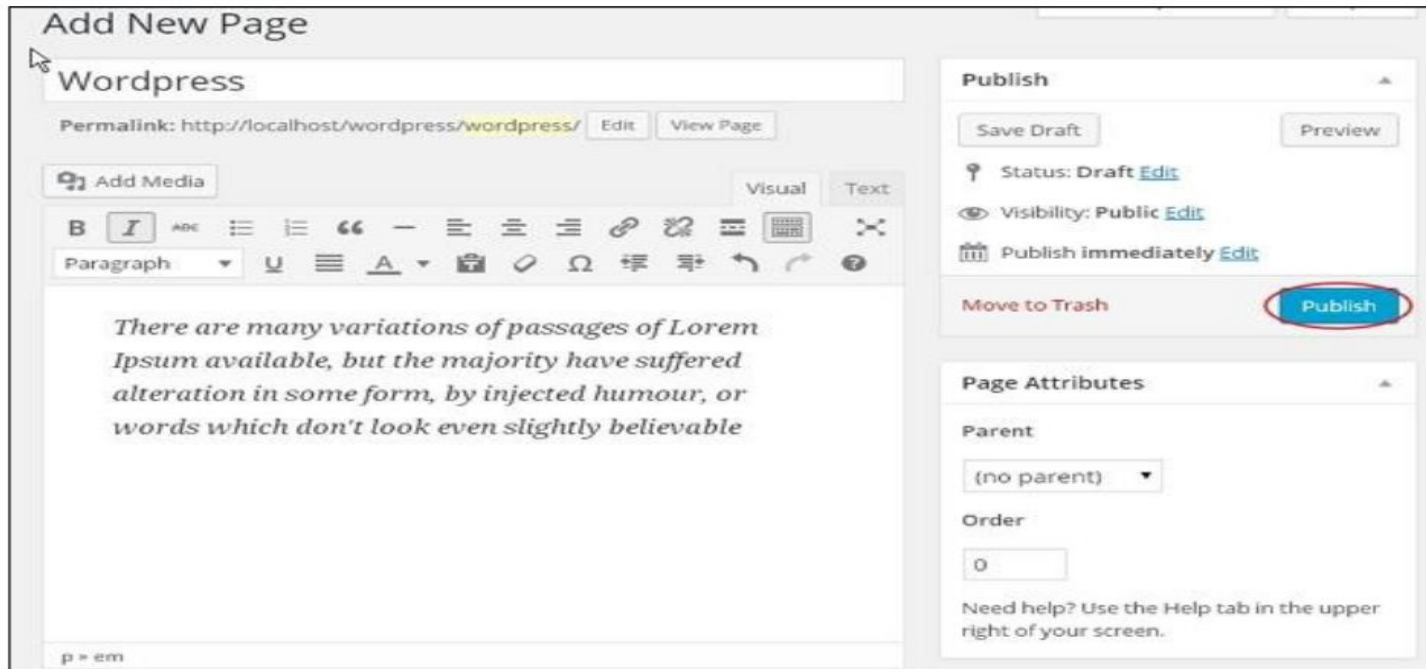

The screenshot displays the WordPress 'Add New Page' editor. At the top, the title 'Wordpress' is entered in the title box. Below it, the permalink is shown as 'http://localhost/wordpress/wordpress/' with 'Edit' and 'View Page' buttons. The 'Add Media' button is on the left, and the 'Visual' and 'Text' tabs are on the right. The main editing area contains a paragraph of Lorem Ipsum text: 'There are many variations of passages of Lorem Ipsum available, but the majority have suffered alteration in some form, by injected humour, or words which don't look even slightly believable'. The right sidebar contains the 'Publish' section with 'Save Draft' and 'Preview' buttons, and the 'Page Attributes' section with 'Parent' set to '(no parent)' and 'Order' set to '0'. A 'Publish' button is also present in the 'Publish' section.

Content Management Systems

Working with Pages

Step (3) – Click on Publish button as shown in the following screen

Add New Page

Wordpress

Permalink: <http://localhost/wordpress/wordpress/> [Edit](#) [View Page](#)

[Add Media](#) [Visual](#) [Text](#)

Content Management Systems

Working with Pages

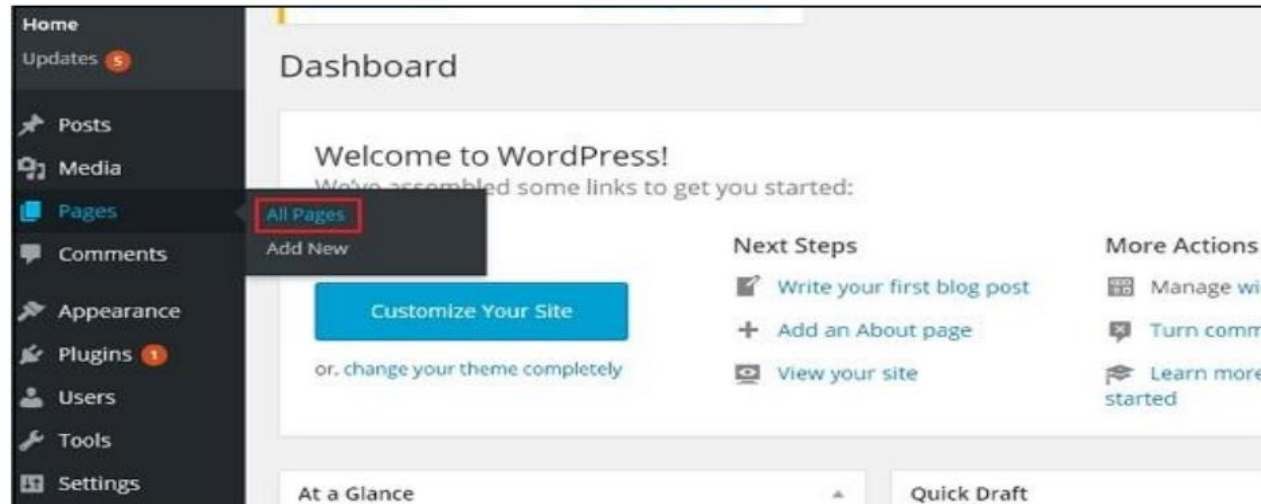

After clicking on publish, your posts get published for the user to view it

Content Management Systems

Working with Pages

WordPress - Edit Pages

Step (1) – Click on Pages → All Pages in WordPress as shown in the following screen.

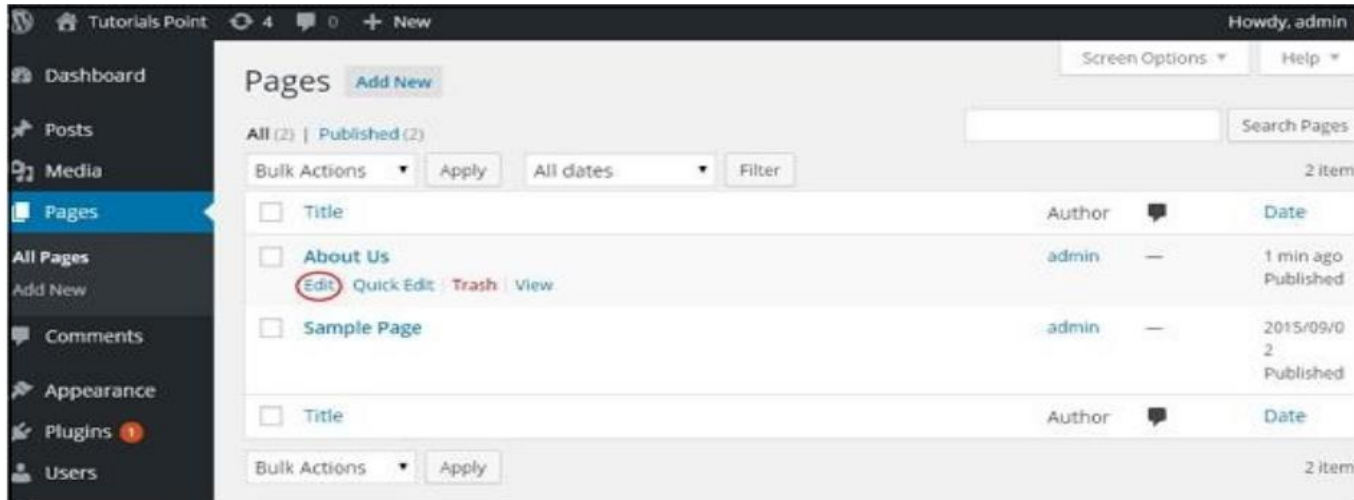

Content Management Systems

Working with Pages

Step (2) – You can view About Us (About Us was created in the chapter WordPress - Add Pages). When the cursor hovers on the pages, then few options get displayed below About Us. There are two ways to edit the Post, i.e., Edit and Quick Edit.

Edit – Click on Edit option in About Us as shown in the following screenshot.

Content Management Systems

Working with Pages

You can edit or change the content or title from the page as per your need, and then click on Update button.

Quick Edit – Click on Quick Edit option in About Us as shown in the following screen.

The screenshot shows the WordPress 'Pages' management screen. On the left is a sidebar with navigation links: Dashboard, Posts, Media, Pages (highlighted), All Pages, Comments, Appearance, Plugins (1), and Users. The main content area is titled 'Pages' and includes an 'Add New' button. Below the title, there are filters for 'All (2)' and 'Published (2)', along with 'Bulk Actions', 'Apply', 'All dates', and 'Filter' buttons. A search bar labeled 'Search Pages' is also present. The table below lists the pages:

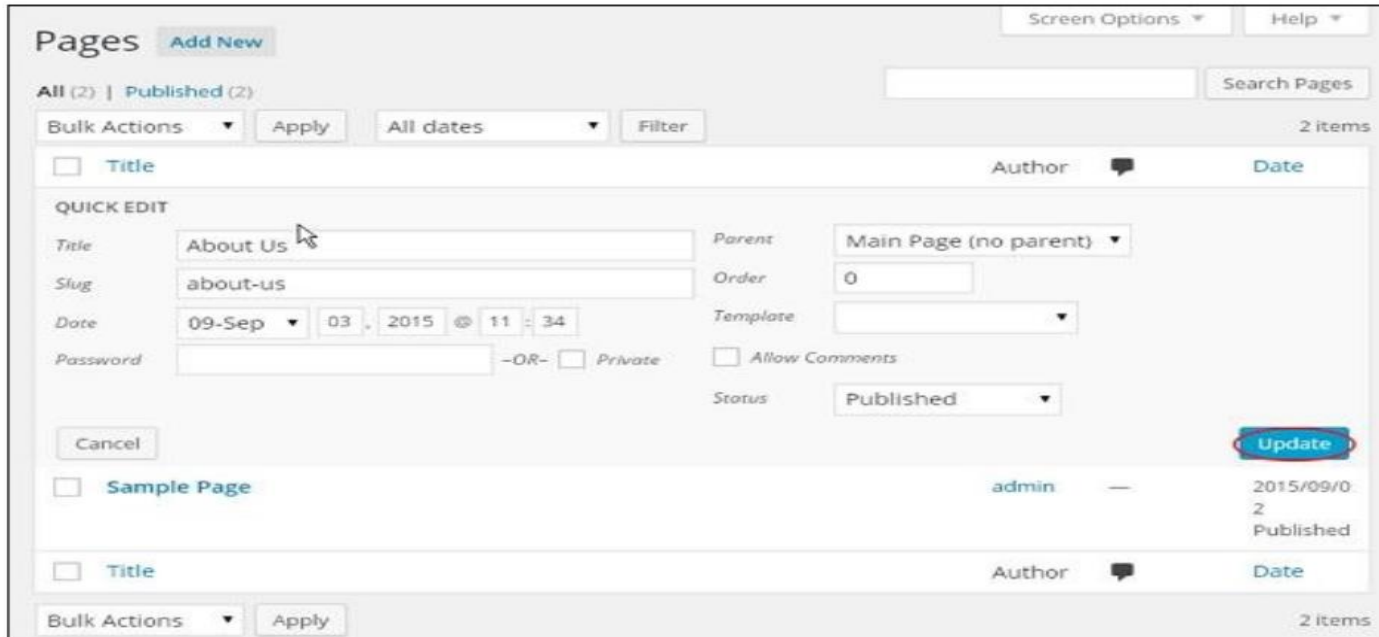

☐	Title	Author	Date
☐	About Us Edit Quick Edit Trash View	admin	16 mins ago Published
☐	Sample Page	admin	2015/09/02 Published
☐	Title	Author	Date

At the bottom of the table, there are 'Bulk Actions', 'Apply', and 'Filter' buttons, and a '2 items' count.

Content Management Systems

Working with Pages

You can edit the Title, Slug and date of the About Us page and can also select the parent for your page as shown in the following shot and then click on Update button

The screenshot displays the Joomla! Pages management interface. At the top, there's a 'Pages' header with an 'Add New' button. Below it, a filter bar shows 'All (2) | Published (2)' and a search box. The main content area is divided into a 'QUICK EDIT' section and a list of pages. The 'QUICK EDIT' section for the 'About Us' page includes fields for Title, Slug, Date, Password, Parent, Order, Template, Allow Comments, and Status. The 'Update' button is highlighted with a red box. Below the edit section, a table lists the pages, showing 'Sample Page' and 'About Us'.

Title	Author	Date
Sample Page	admin	2015/09/02 Published

WordPress - Delete Pages

Following are the steps to Delete pages in wordPress.

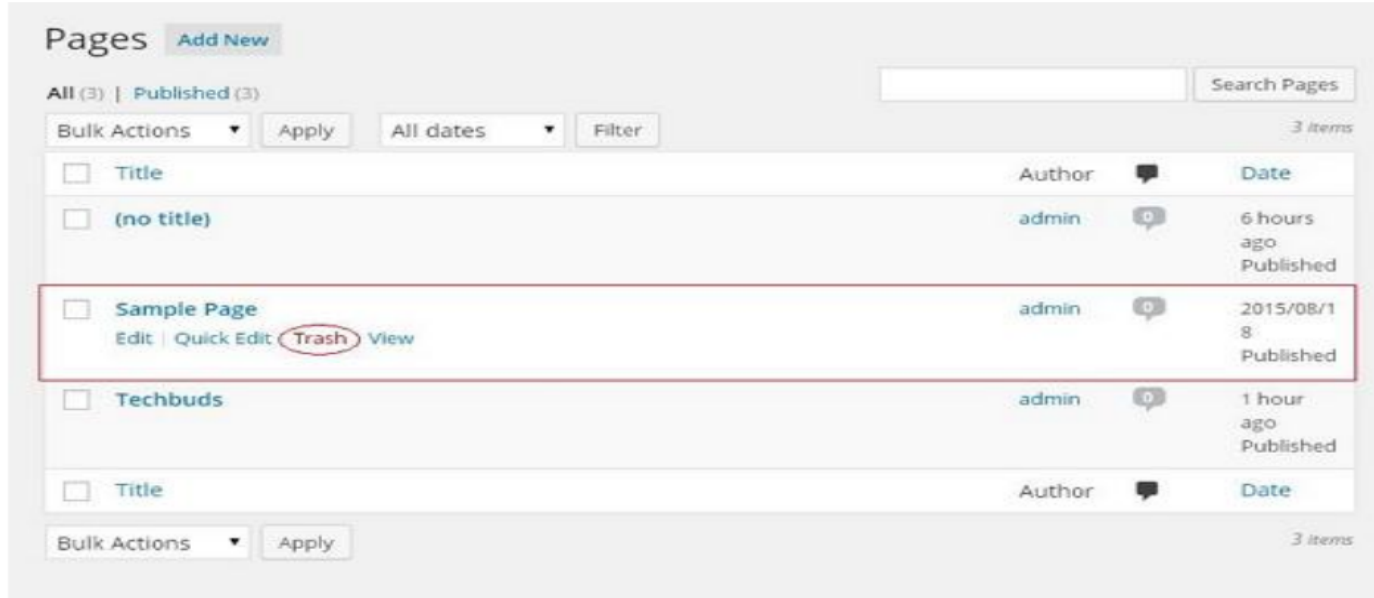

Step (1) – Click on Pages → All Pages in WordPress

Content Management Systems

Working with Pages

Step (2) – You can delete Sample Page (Sample Page is created by default in WordPress). When the cursor hovers on the pages, then a few options gets displayed below the Sample Page. Click on Trash option to delete the post

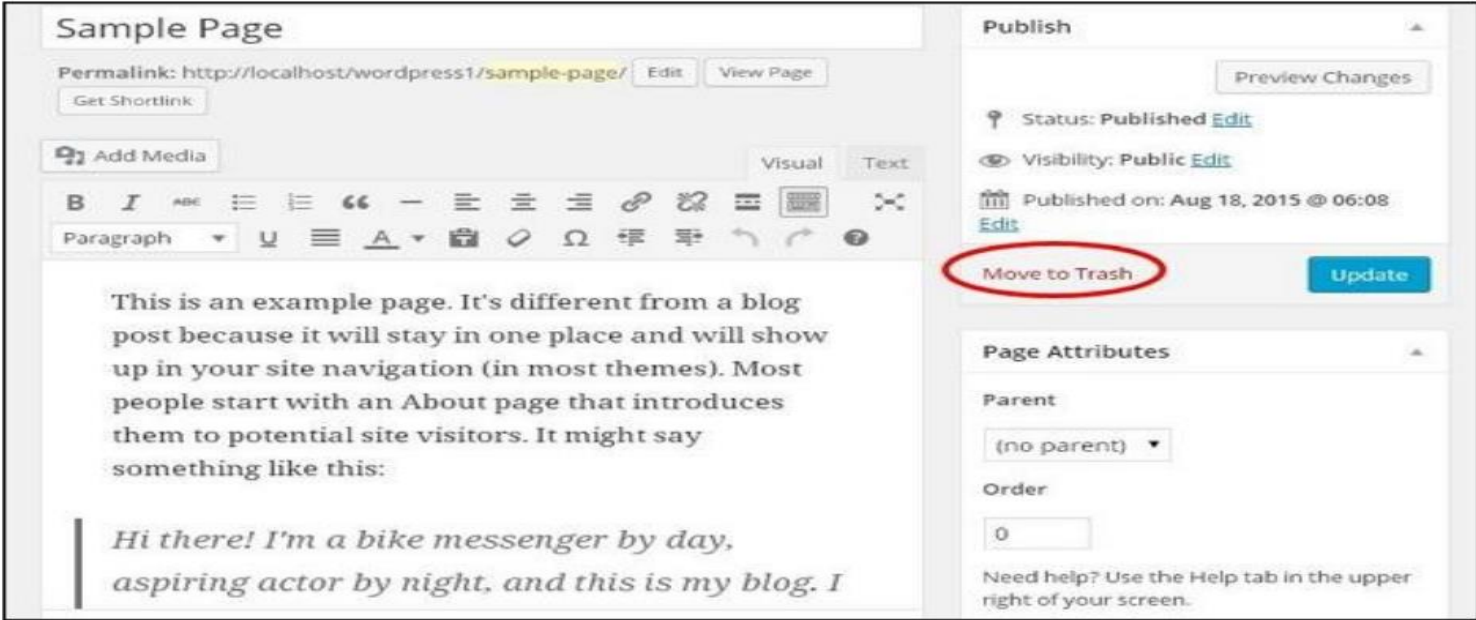

The screenshot shows the WordPress 'Pages' management screen. At the top, there's a 'Pages' header with an 'Add New' button. Below it, a search bar and filters for 'All (3)' and 'Published (3)' are visible. A table lists the pages, with columns for checkboxes, titles, authors, comment counts, and dates. The 'Sample Page' is highlighted with a red box, and its context menu (Edit, Quick Edit, Trash, View) is shown below it, with 'Trash' circled in red. Other pages listed include '(no title)', 'Techbuds', and 'Title'.

☐	Title	Author	Comments	Date
☐	(no title)	admin	0	6 hours ago Published
☐	Sample Page	admin	0	2015/08/18 Published
☐	Techbuds	admin	0	1 hour ago Published
☐	Title	Author		Date

Content Management Systems

Working with Pages

Or alternatively you can also delete your page directly while editing or adding page by clicking on the Move to Trash button as shown in the following screen.

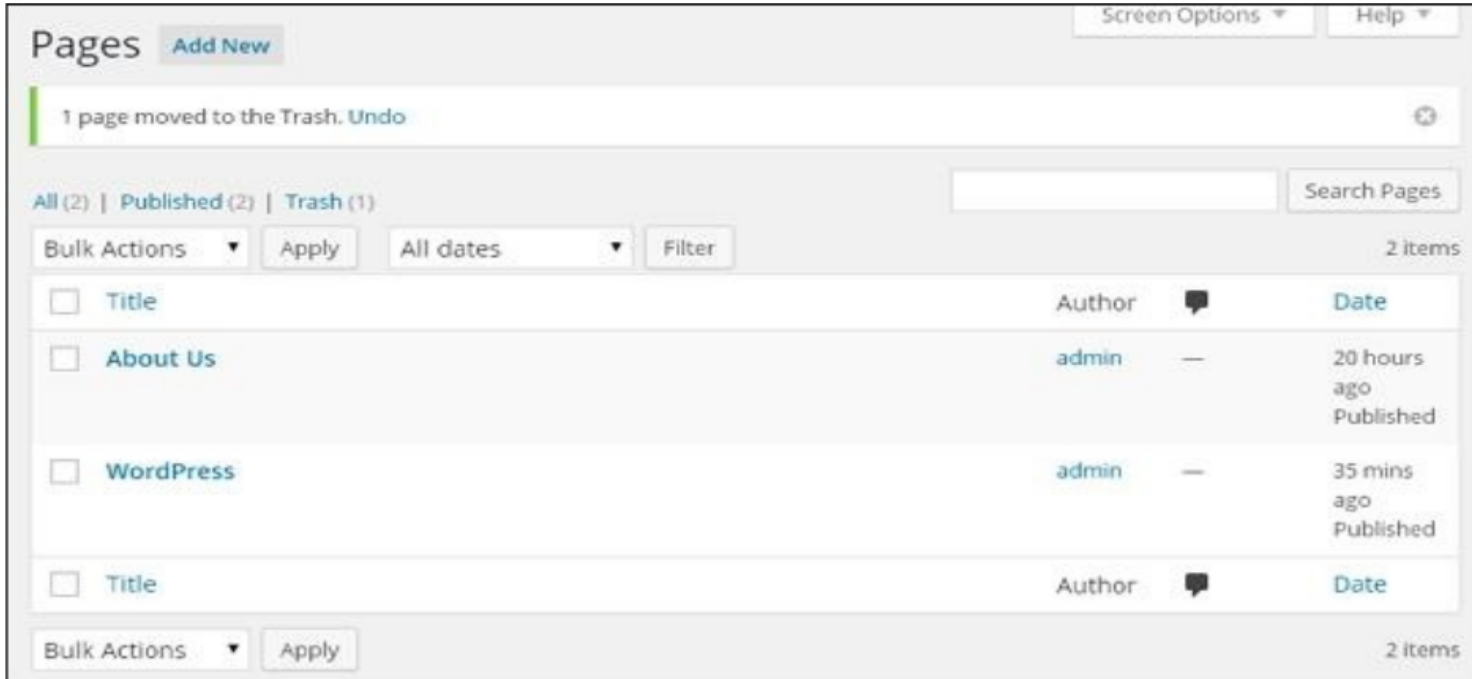

The screenshot displays the WordPress page editor for a page titled "Sample Page". The interface is divided into three main sections: the editor area on the left, the "Publish" sidebar on the top right, and the "Page Attributes" sidebar on the bottom right.

- Editor Area:** At the top, it shows the "Permalink" as `http://localhost/wordpress1/sample-page/` with "Edit" and "View Page" buttons. Below this is an "Add Media" button and a rich text editor toolbar. The main content area contains two paragraphs: "This is an example page. It's different from a blog post because it will stay in one place and will show up in your site navigation (in most themes). Most people start with an About page that introduces them to potential site visitors. It might say something like this:" and "Hi there! I'm a bike messenger by day, aspiring actor by night, and this is my blog. I".
- Publish Sidebar:** It includes a "Preview Changes" button. The status is "Published" with an "Edit" link. Visibility is set to "Public" with an "Edit" link. The page was published on "Aug 18, 2015 @ 06:08" with an "Edit" link. At the bottom of this sidebar, the "Move to Trash" button is circled in red, and an "Update" button is visible.
- Page Attributes Sidebar:** It shows the "Parent" dropdown set to "(no parent)" and the "Order" set to "0". A note at the bottom says: "Need help? Use the Help tab in the upper right of your screen."

Content Management Systems

Working with Pages

Step (3) – To confirm that you have deleted the page, view your page list.

The screenshot shows the WordPress 'Pages' management interface. At the top, there's a 'Pages' header with an 'Add New' button. Below it, a message states '1 page moved to the Trash. Undo'. The interface includes filters for 'All (2)', 'Published (2)', and 'Trash (1)'. A search bar and 'Search Pages' button are also present. The main table displays two published pages, each with a checkbox, title, author, status, and date. The bottom of the screen shows bulk action controls and a '2 items' count.

Content Management Systems

Working with Posts

Posts are also known as articles and sometimes referred as blogs or blog posts. These are used to popularize your blogs.

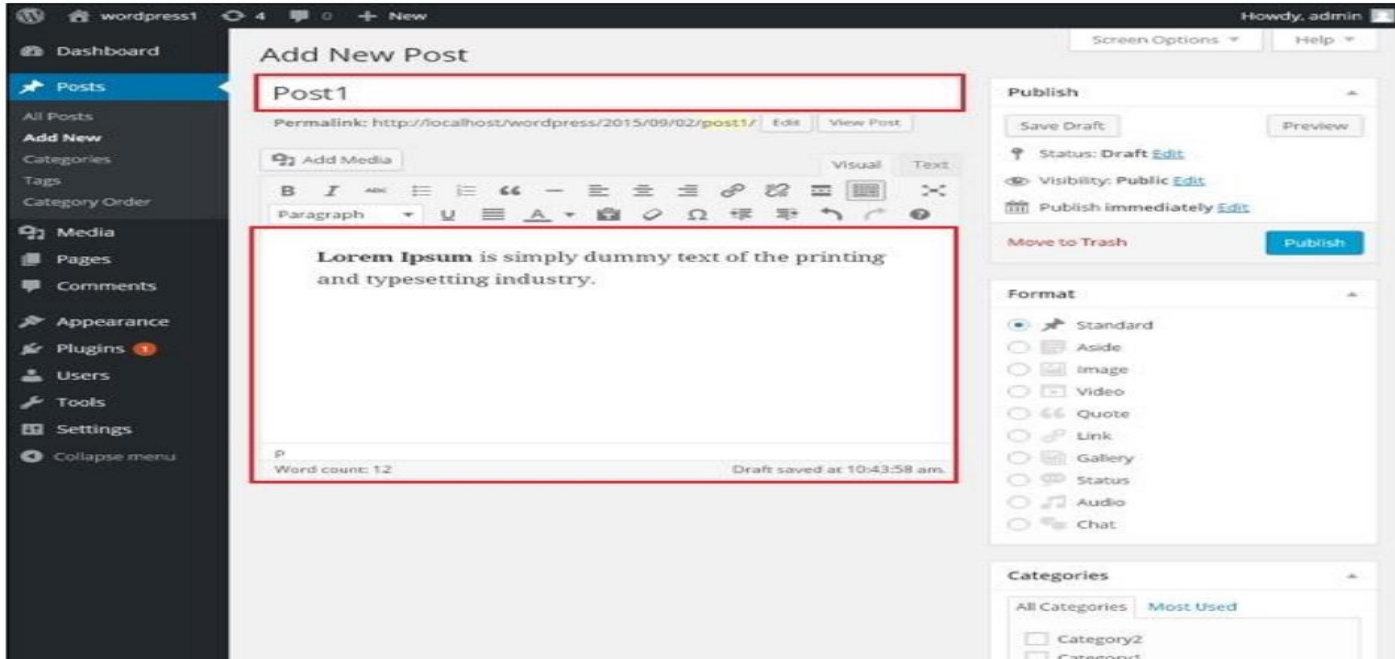

Following are the simple steps to Add Posts in WordPress.
Step (1) – Click on Posts → Add New in WordPress.

Content Management Systems

Working with Posts

Step (2) – You will get the editor page of the Post as shown in the following screen.
You can use the WordPress WYSIWYG editor to add the actual content of your post.

The screenshot displays the WordPress 'Add New Post' editor. On the left is a dark sidebar menu with options: Dashboard, Posts (selected), All Posts, Add New, Categories, Tags, Category Order, Media, Pages, Comments, Appearance, Plugins (1 update), Users, Tools, Settings, and Collapse menu. The main content area is titled 'Add New Post' and features a text input field for the title, currently containing 'Post1'. Below the title is the permalink: 'http://localhost/wordpress/2015/09/02/post1/'. A toolbar with various formatting options (bold, italic, text color, background color, link, unlink, list, quote, code, image, media, video, audio, chat) is visible. The main text area contains the placeholder text: 'Lorem Ipsum is simply dummy text of the printing and typesetting industry.' Below the text area, it shows 'Word count: 12' and 'Draft saved at 10:43:58 am.' On the right side, there are three panels: 'Publish' with buttons for 'Save Draft', 'Preview', and 'Publish', and status/visibility options; 'Format' with a list of post formats (Standard, Aside, Image, Video, Quote, Link, Gallery, Status, Audio, Chat); and 'Categories' with a list of categories (Category2, Cateeeorv1).

Content Management Systems

Working with Posts

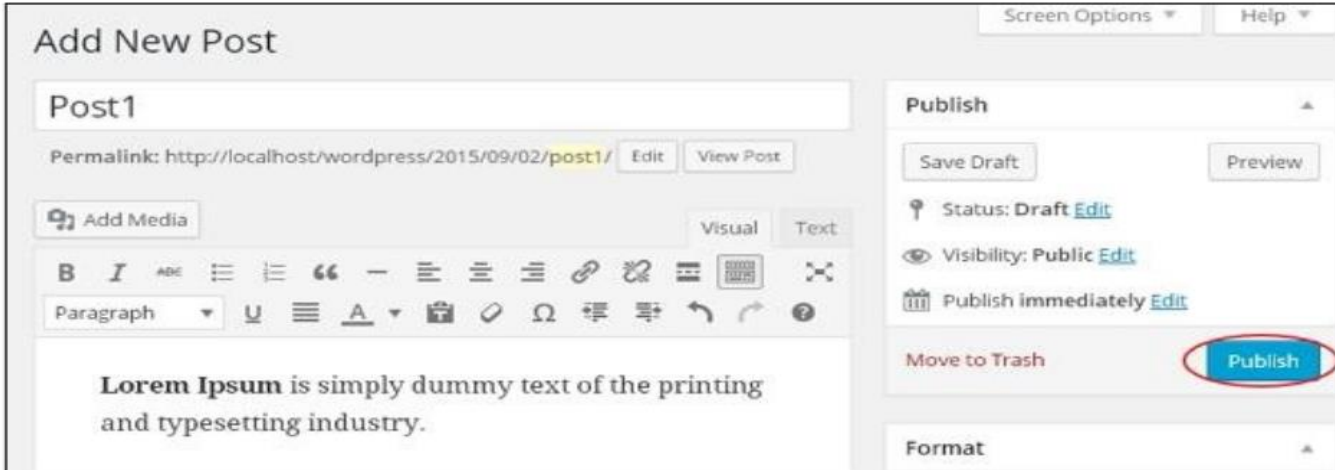

Following are the fields on the editor page of the Add Posts Page.

Step (3) – Click on Publish button to publish your respective post.

Following are the few other options present in the Publish section.

Post Title – Enter the title of the post, i.e., Post1.

Post Content – Enter the content of your post.

Add New Post

Deleting a category does not delete the posts in that category. Instead, posts that were only assigned to the deleted category are set to the default category **Standard Blog Post**. The default category cannot be deleted. Categories can be selectively converted to tags using the [category to tag converter](#).

Add New Category

Name

The name is how it appears on your site.

Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

Parent Category

Categories, unlike tags, can have a hierarchy. You might have a Jazz category, and under that have children categories for Bebop and Big Band. Totally optional.

Description

The description is not prominent by default; however, some themes may show it.

Add New Category

Content Management Systems

Working with Categories

Tags are more specific than categories

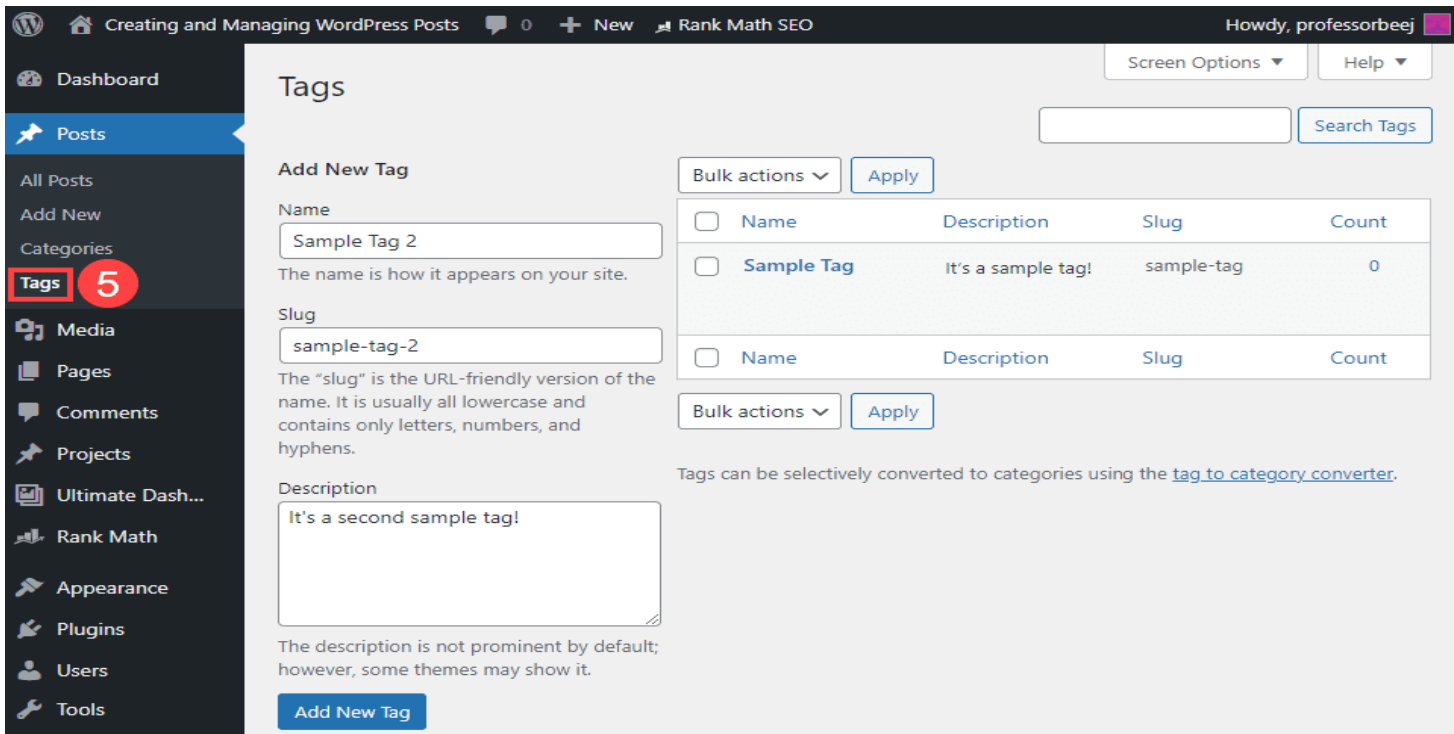

On a music-site they may include “guitar”, “piano”, etc

Most used tags collect in a tag cloud for easy of re-use.

On a music-site they may include “guitar”, “piano”, etc

Most used tags collect in a tag cloud for easy of re-use.

Content Management Systems

Working with Media

Media is a tab in your WordPress admin sidebar that is used to manage user uploads. This includes images, audio, video, and other files. Under the Media menu, there are two screens.

The first gives you access to the WordPress Media Library where you can view and manage the images and other media files you added to your WordPress website.

The second screen allows you to upload new files to the media library. However, it is also possible to upload media files from the Library screen or when editing a post or page.

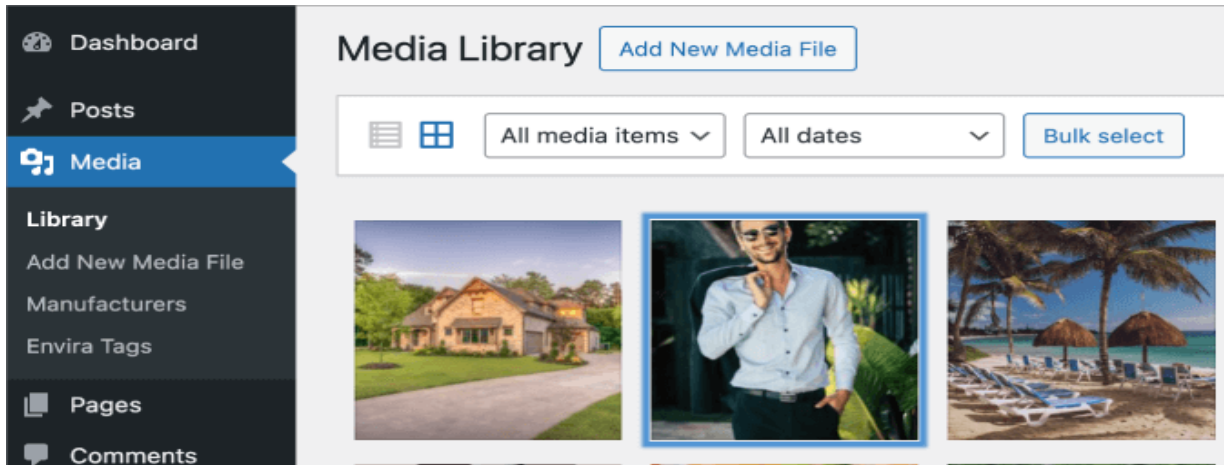

Content Management Systems

Working with Media

The WordPress Media Library

The first Media screen is 'Library', and this provides a list of all the files you have uploaded to the WordPress Media Library.

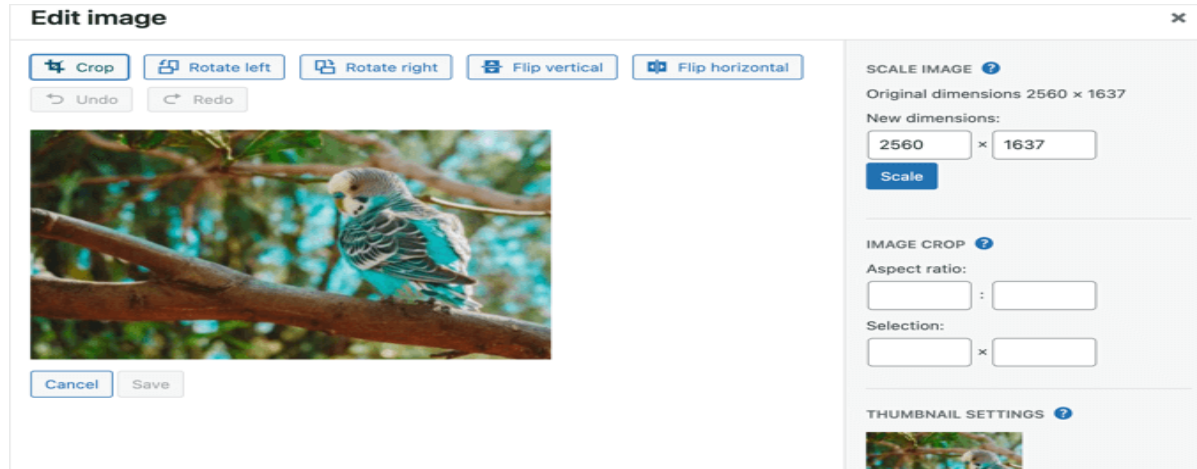

There are options to view, filter, edit, and delete these files.

Content Management Systems

Working with Media

WordPress media editor also has some lesser-known features, such as the ability to do [basic image editing](#) right from the Media Library. The 'Edit image' feature lets you crop, resize, and scale images right from your dashboard.

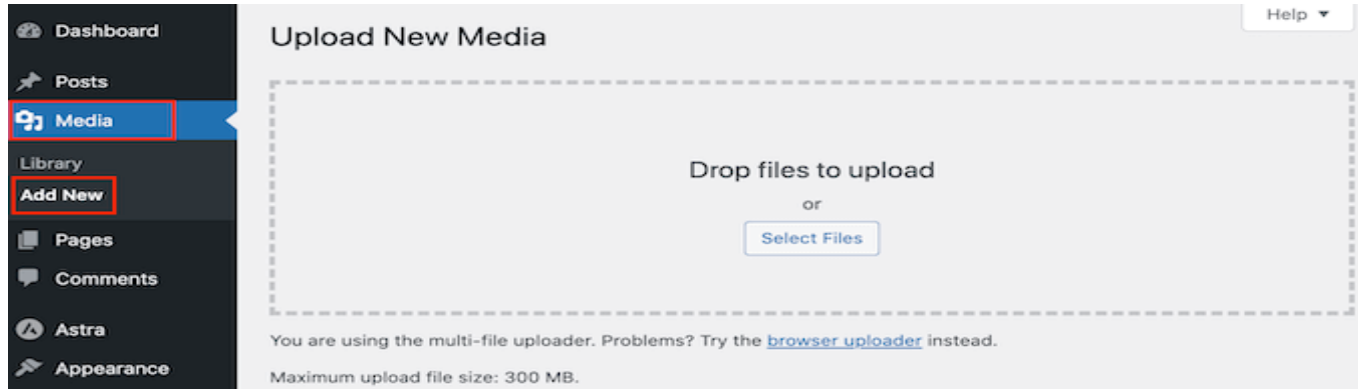

Content Management Systems

Working with Media

Adding New Files to the WordPress Media Library

The second screen on the Media tab is 'Add New', which allows users to upload files.

Remember, users can also upload media files like images and videos while writing a post or page. However, the Add 'New link' allows users to upload files without attaching them to a specific post or page.

Working with Categories

The details to be added in the categories page:

Name – Enter the unique name of categories.

Slug – A word chosen to describe your post. It is specified in the tags URL.

Parent – By selecting the parent category from dropdown, you can set the particular category as sub-category or can keep it as None.

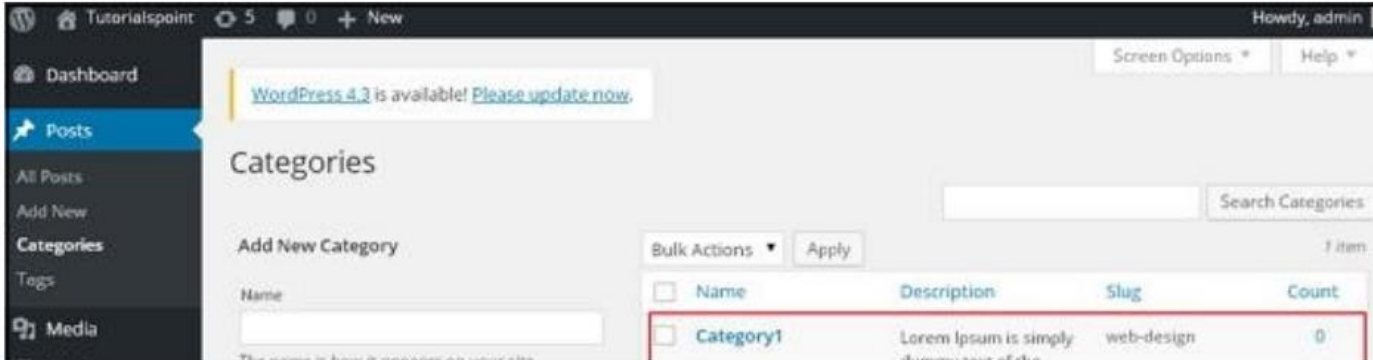

Description – Add brief description of your category. It is optional.

Content Management Systems

Working with Categories

Step (3) – After filling all the information about Categories, click on Add New Category button.

Step (4) – After clicking on Add New Category, the new created category will get displayed on the right side of the page as shown in the following screen.

WordPress dashboard screenshot showing the Categories management page. The left sidebar shows the 'Categories' menu item. The main content area shows the 'Add New Category' form with a text input field for the name. Below the form, a table lists the categories. A red box highlights the newly created category, 'Category1', which has a description of 'Lorem Ipsum is simply', a slug of 'web-design', and a count of 0.

Name	Description	Slug	Count
Category1	Lorem Ipsum is simply	web-design	0

Content Management Systems

Working with Categories

WordPress - Edit Category

Following are the simple steps to edit categories in WordPress.

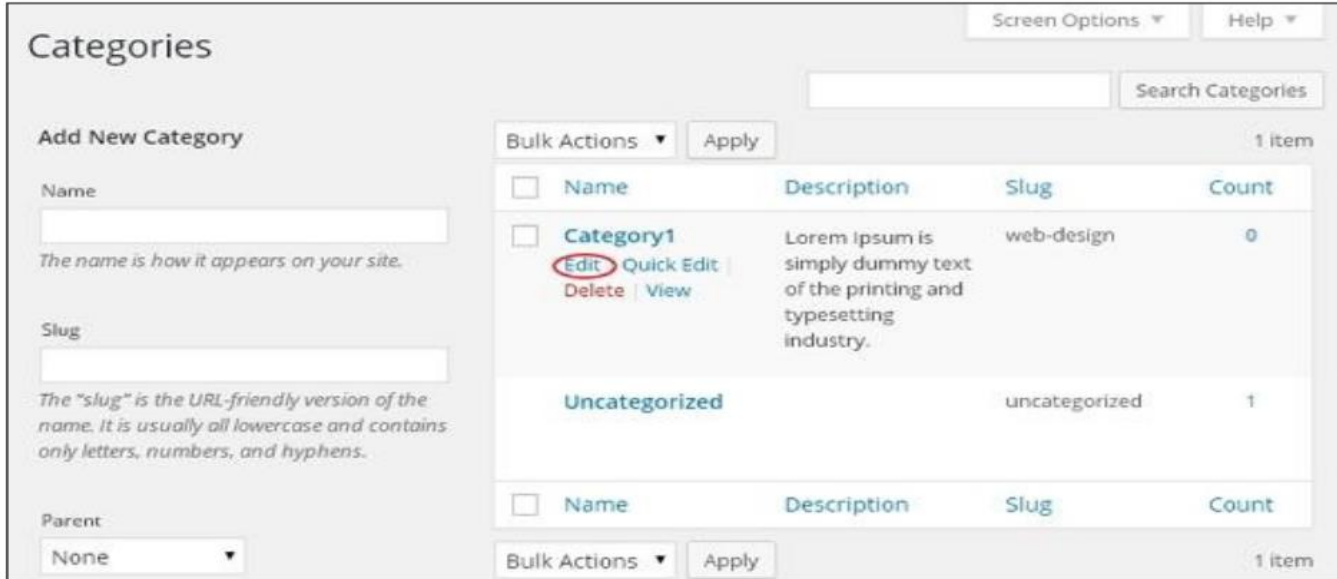

Step (1) – Click on Posts → Categories in WordPress.

Step (2) – You can view Category1 (Category1 was created in the chapter WordPress - Add Category). When the cursor hovers on the Categories, then a few options get displayed below the Category name. There are two ways to edit the categories i.e. Edit and Quick Edit

Content Management Systems

Working with Categories

Edit – Click on Edit option in Categories section as seen in the following screenshot.

The screenshot shows the WordPress 'Categories' management screen. On the left, there's a form to 'Add New Category' with fields for 'Name' and 'Slug', and a 'Parent' dropdown set to 'None'. On the right, there's a table of existing categories. The first category, 'Category1', has an 'Edit' link circled in red. Below it is the 'Uncategorized' category. At the bottom, there's another identical table structure.

In the same way we can edit tag information, Quick edit tag information, delete tag information by opening the tags and choosing the tag.

Content Management Systems

Working with Tags

Following are the details of the fields on Tags.

.

Name – Enter the name of tags.

Slug – A word chosen to describe your post. It is specified in the tags URL.

Description – Add brief description of your tag. It gets displayed when you hover on the tag

After filling all the information about Tags, click on Add New Tag button.

Step (3) – The new created tags will get displayed on the right side of the page as shown in the following screenshot

Content Management Systems

Working with Media

Media is a tab in your WordPress admin sidebar that is used to manage user uploads. This includes images, audio, video, and other files. Under the Media menu, there are two screens.

The first gives you access to the WordPress Media Library where you can view and manage the images and other media files you added to your WordPress website.

The second screen allows you to upload new files to the media library. However, it is also possible to upload media files from the Library screen or when editing a post or page.

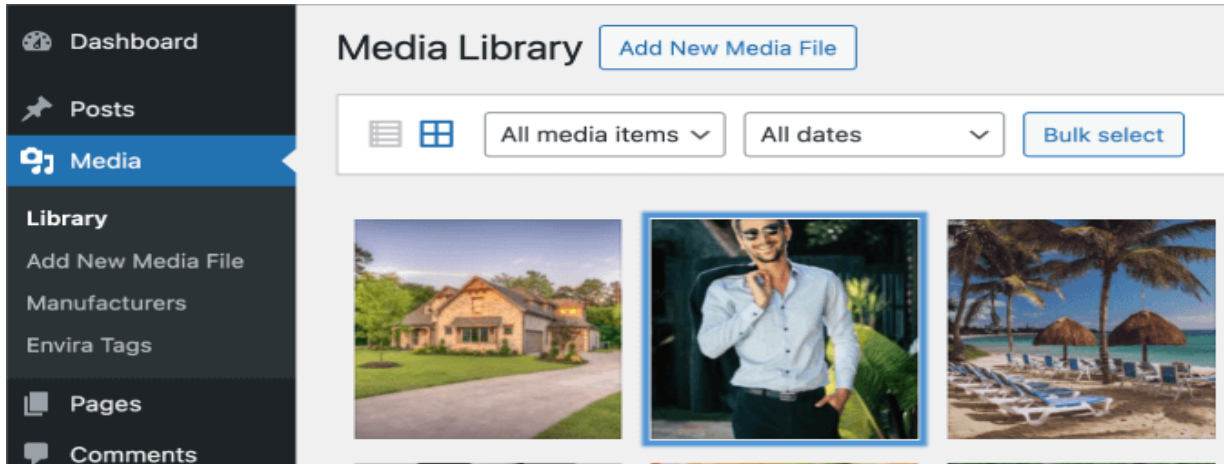

Content Management Systems

Working with Media

The WordPress Media Library

The first Media screen is 'Library', and this provides a list of all the files you have uploaded to the WordPress Media Library.

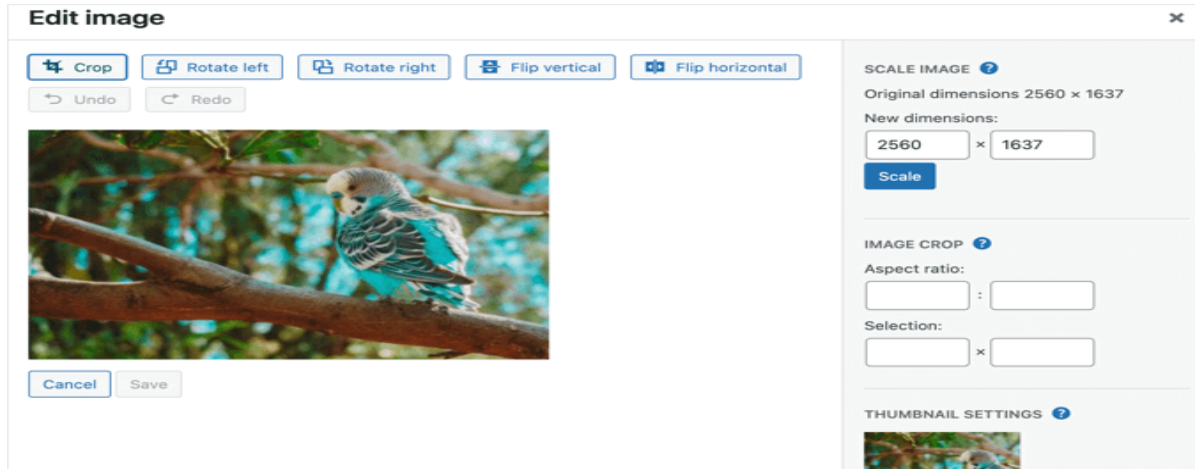

There are options to view, filter, edit, and delete these files.

Content Management Systems

Working with Media

WordPress media editor also has some lesser-known features, such as the ability to do [basic image editing](#) right from the Media Library. The 'Edit image' feature lets you crop, resize, and scale images right from your dashboard.

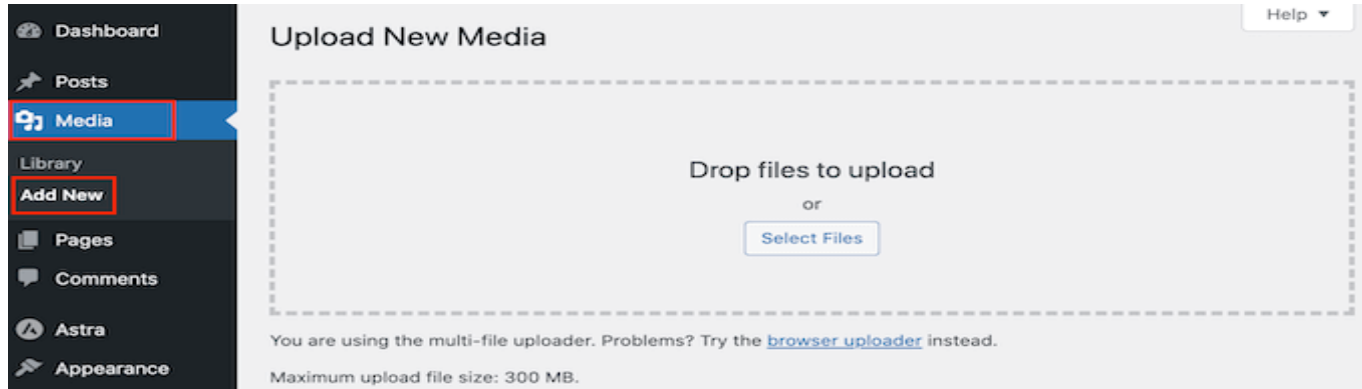

Content Management Systems

Working with Media

Adding New Files to the WordPress Media Library

The second screen on the Media tab is 'Add New', which allows users to upload files.

Remember, users can also upload media files like images and videos while writing a post or page. However, the Add 'New link' allows users to upload files without attaching them to a specific post or page.

Content Management Systems

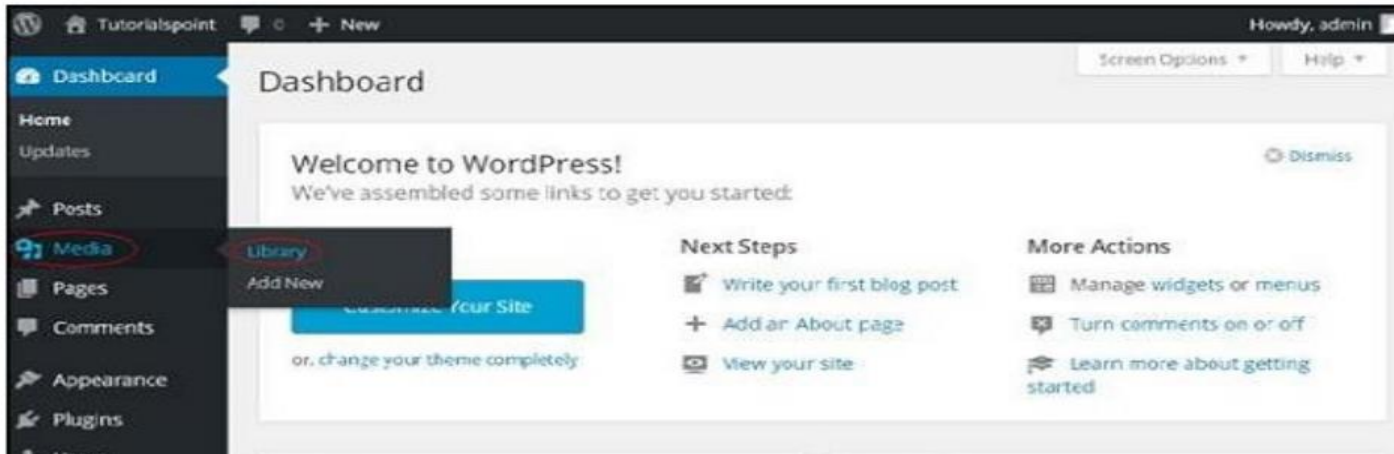

Working with Media

Media Library

consists of the images, audios, videos and files that you can upload and add to the content when writing a Post or Page. Here you can view, add, edit or delete any media related objects if not needed.

Following are the steps to understand about Media Library.

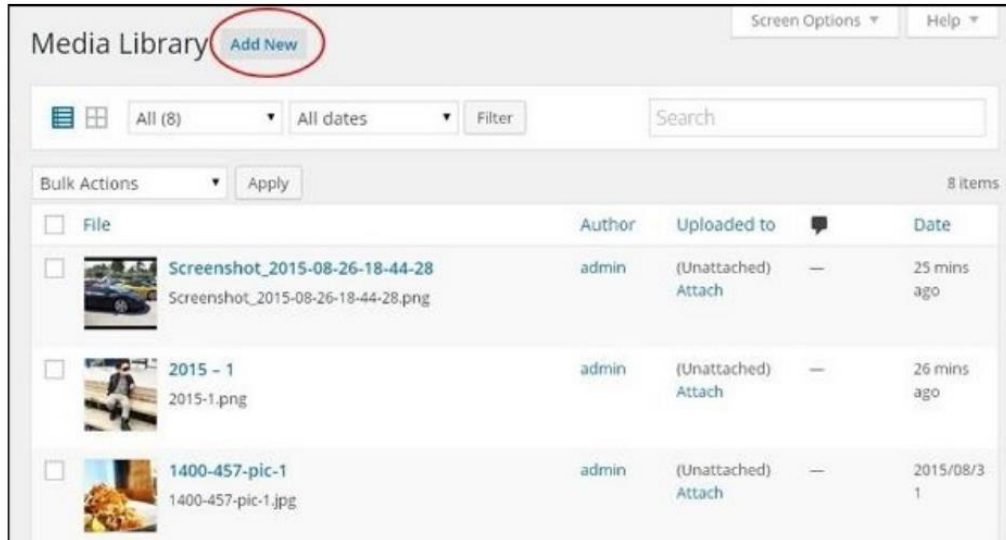

Step (1) – Click on Media → Library in WordPress.

Content Management Systems

Working with Media

Step (2) – You can view media files like images, audios, videos. Click on Add Media Button/Add New

Content Management Systems

Working with Media

Step (3) – The Upload New Media page gets displayed. You can learn how to Add Media in the next chapter.

WordPress – Modifying Settings (General, Reading, Writing and Media)

P.Sreenivas

Department of Computer Applications

Content Management Systems

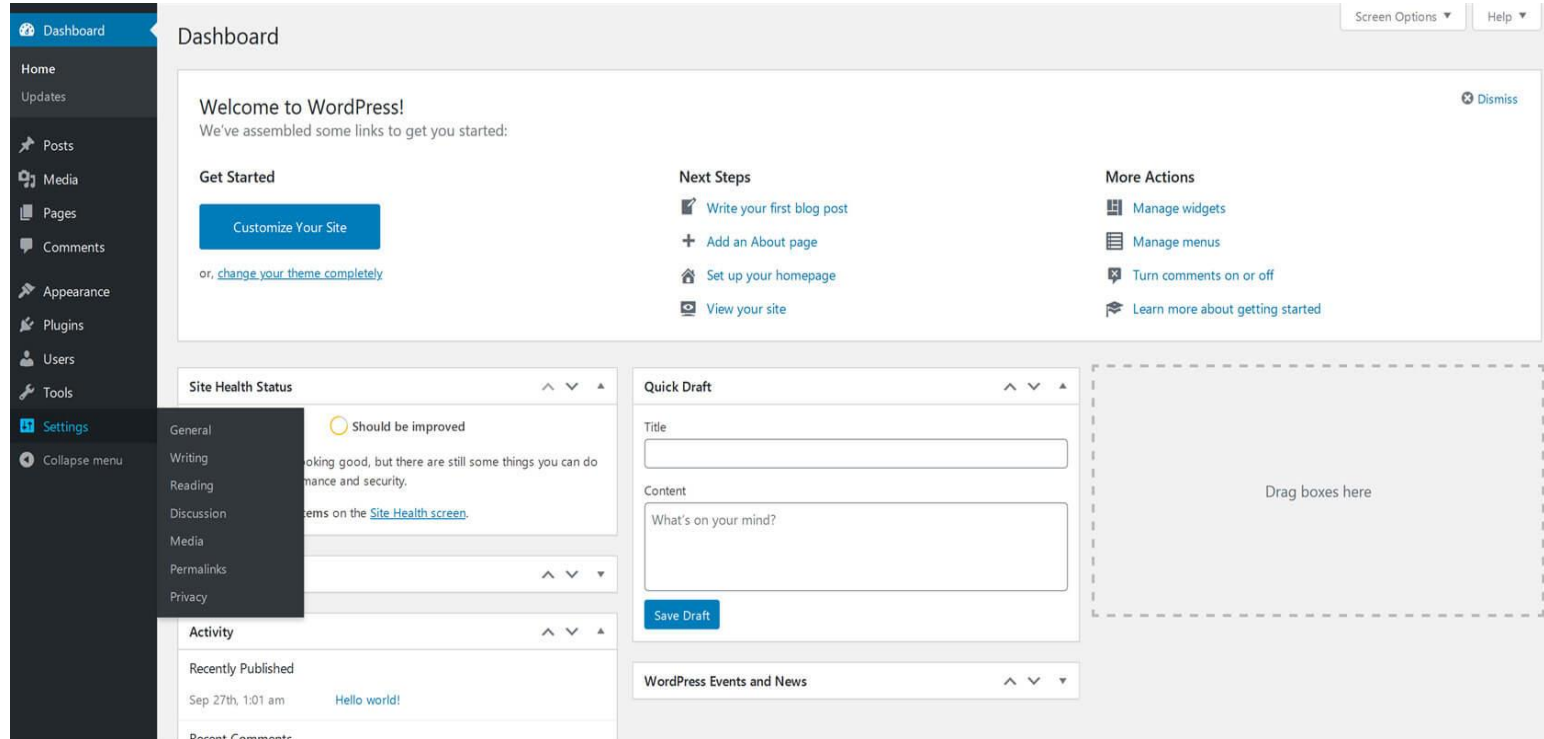

Modifying settings (General, Reading, Writing, Media)

We will see how all of these settings function and how we can manage these settings.

Content Management Systems

Modifying settings (General, Reading, Writing, Media)

The screenshot displays the WordPress Dashboard interface. On the left is a dark sidebar menu with options: Dashboard, Home, Updates, Posts, Media, Pages, Comments, Appearance, Plugins, Users, Tools, and Settings (highlighted). The main content area is titled 'Dashboard' and includes a 'Welcome to WordPress!' message with a 'Dismiss' link. Below this are three sections: 'Get Started' with a 'Customize Your Site' button and a link to 'change your theme completely'; 'Next Steps' with links to 'Write your first blog post', 'Add an About page', 'Set up your homepage', and 'View your site'; and 'More Actions' with links to 'Manage widgets', 'Manage menus', 'Turn comments on or off', and 'Learn more about getting started'. At the bottom, there are four widgets: 'Site Health Status' (showing 'Should be improved'), 'Quick Draft' (with fields for Title and Content, and a 'Save Draft' button), 'Activity' (showing 'Recently Published' and 'Recent Comments'), and 'WordPress Events and News'.

Content Management Systems

Modifying settings (General, Reading, Writing, Media)

General settings screen

The general screen setting is the first section in the WordPress settings. It mainly controls your website's most basic configuration settings where you can view and edit basic information about your website.

This location is where you can set the title for the very first field, and then add the tagline, edit date format, time format, WordPress URL, site address, membership option, new user role, site language, when the week starts on, and time zone.

Content Management Systems

Modifying settings (General, Reading, Writing, Media)

The screenshot shows the WordPress dashboard's 'General Settings' page. On the left is a dark sidebar with icons and labels for 'Dashboard', 'Posts', 'Media', 'Pages', 'Comments', 'Appearance', 'Plugins', 'Users', and 'Tools'. The main content area is titled 'General Settings' and includes a 'Help' button in the top right corner. It contains four input fields: 'Site Title' with the value 'My blog', 'Tagline' with the value 'Just another WordPress site', 'WordPress Address (URL)' with the value 'http://www.foxsports.com', and 'Site Address (URL)' with the value 'http://www.foxsports.com'. Below the 'Site Address (URL)' field is a note: 'Enter the address here if you [want your site home page to be different from your WordPress installation directory.](#)'

Site Title

Tagline

In a few words, explain what this site is about.

WordPress Address (URL)

Site Address (URL)

Enter the address here if you [want your site home page to be different from your WordPress installation directory.](#)

Content Management Systems

Modifying settings (General, Reading, Writing, Media)

Site Title

In this setting, you will enter the title of your website or blog. Most browsers will show this title at the top of the page.

Tagline

The tagline is used to explain about the purpose of your website in a few words. It is a small introduction to your site, like a motto. **WordPress**

Content Management Systems

Modifying settings (General, Reading, Writing, Media)

WordPress Address (URL)

In the “WordPress Address (URL)” field, you need to enter the full URL of the location where all the files of your WordPress are present e:g wp-admin, wp-content, wp-includes, and wp-config.php, etc.

For example, if you installed WordPress in a directory with the name “blog”, then the WordPress URL would be <https://example.com/blog> (where example.com is your main domain).

Site Address (URL)

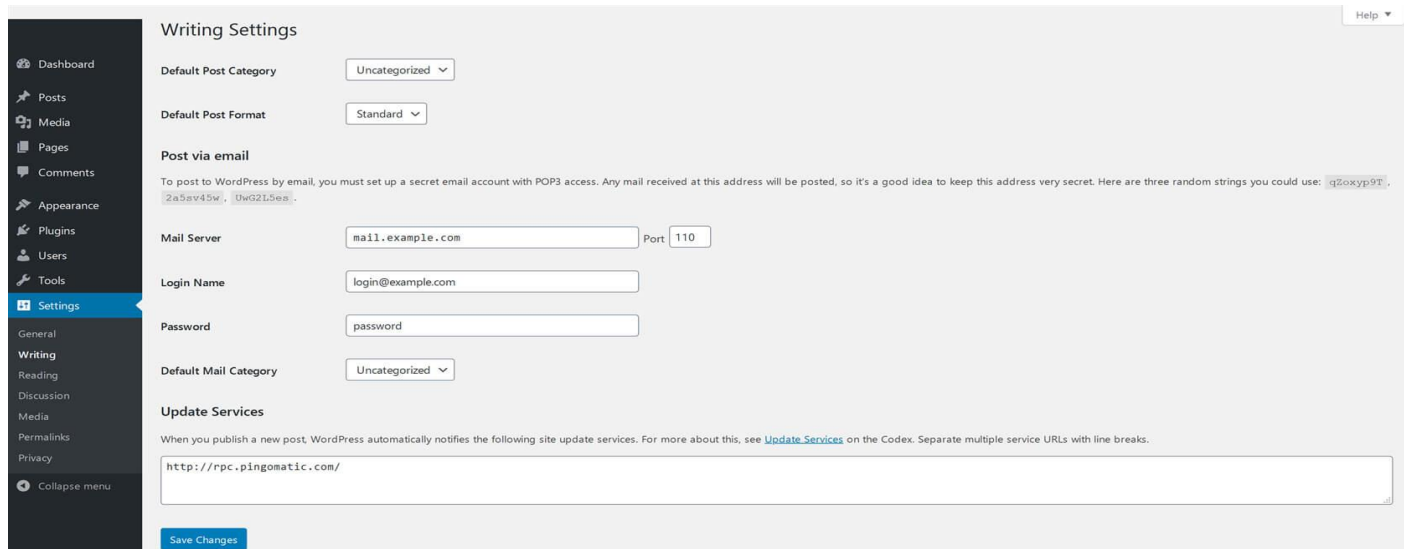

Your Site Address (URL) is the address that visitors use to access your website. This is the address that users type in their browser to visit your website.

Content Management Systems

Modifying settings (General, Reading, Writing, Media)

Writing settings screen

Writing screen settings are important and allow you to set some default values that can become handy when creating a new post.

The screenshot shows the WordPress 'Writing Settings' page. On the left is a dark sidebar menu with options: Dashboard, Posts, Media, Pages, Comments, Appearance, Plugins, Users, Tools, Settings (highlighted), General, Writing, Reading, Discussion, Media, Permalinks, Privacy, and Collapse menu. The main content area is titled 'Writing Settings' and includes a 'Help' dropdown. It contains several settings: 'Default Post Category' (Uncategorized), 'Default Post Format' (Standard), 'Post via email' (with instructions and random strings), 'Mail Server' (mail.example.com), 'Port' (110), 'Login Name' (login@example.com), 'Password' (password), and 'Default Mail Category' (Uncategorized). At the bottom, there's an 'Update Services' section with a text area containing 'http://rpc.pingomatic.com/' and a 'Save Changes' button.

Writing Settings Help ▾

Default Post Category

Default Post Format

Post via email

To post to WordPress by email, you must set up a secret email account with POP3 access. Any mail received at this address will be posted, so it's a good idea to keep this address very secret. Here are three random strings you could use: qZoxyp9T, 2a5sv45w, UwG2L5es.

Content Management Systems

WordPress – Database Structure

P.Sreenivas

Department of Computer Applications

Content Management Systems

Database Structure

WordPress and nearly all plugins store their settings in a special location on your server named the database. Data stored in the database is organized in so-called 'tables.'

Content Management Systems

Database Structure

List of WordPress Core Tables

- ☐ wp_options
- ☐ wp_users,
- ☐ wp_usermeta
- ☐ wp_posts
- ☐ wp_postmeta
- ☐ wp_terms
- ☐ wp_term_relationships
- ☐ wp_term_taxonomy
- ☐ wp_comments
- ☐ wp_commentmeta
- ☐ wp_links

Content Management Systems

Database Structure

wp_options

The table wp_options is one of the most important WordPress database tables and stores all the settings of a WordPress site, like the URL, the title, installed plugins, etc! Most of the plugins store settings in this table as well.

Content Management Systems

Database Structure

wp_users, wp_usermeta

wp_users Stores all the registered users on a WordPress site. It contains basic information about a user, like a username and encrypted password, email, time of registration, display name, status, and a few more fields.

wp_usermeta Stores the metadata ('additional *data*') of the users. It extends the table **wp_users** with more data. For example, a user's first name is stored in the table **wp_usermeta** instead of the table **wp_users**.

Content Management Systems

Database Structure

wp_posts, wp_postmeta

wp_posts Table stores all content-related data of a WordPress website. All posts, pages, and their revisions are available in the wp_posts table. It might be unclear, but WordPress stores much more into that table.

This table also contains navigation menu items, media files, and attachments like images and content data used by plugins.

In wp_posts is a table column post_type which segments that kind of different data so that a database query can request specific types of data. post_type is the most important column in this table.

Content Management Systems

Database Structure

wp_links

This table contains information about custom links added to your site. It has been deprecated and is not used any longer. There are a few older plugins that still make use of it, but usually, it is an empty table.

Content Management Systems

Database Structure

Table	Action	Rows	Type	Collation
☐ wp_commentmeta	Browse Structure Search Insert Empty Drop	~0	InnoDB	utf8_general_ci
☐ wp_comments	Browse Structure Search Insert Empty Drop	~1	InnoDB	utf8_general_ci

Content Management Systems

WordPress – User roles and their responsibilities

P.Sreenivas

Department of Computer Applications

Content Management Systems

User roles and responsibilities

WordPress uses a concept of Roles, designed to give the site owner the ability to control what users can and cannot do within the site.

A site owner can manage the user access to such tasks as writing and editing posts, creating Pages, creating categories, moderating comments, managing plugins, managing themes, and managing other users, by assigning a specific role to each of the users.

Content Management Systems

User roles and responsibilities

WordPress has six pre-defined roles: Super Admin, Administrator, Editor, Author, Contributor and Subscriber. Each role is allowed to perform a set of tasks called Capabilities.

There are many capabilities including “publish_posts”, moderate_comments”, and “edit_users”. A default set of capabilities is pre-assigned to each role, but other capabilities can be assigned or removed using the add_cap() and remove_cap() functions. New roles can be introduced or removed using the add_role() and remove_role() functions.

Content Management Systems

User roles and responsibilities

- ❑ The Super Admin role allows a user to perform all possible capabilities. Each of the other roles has a decreasing number of allowed capabilities.
- ❑ For instance, the Subscriber role has just the “read” capability. One particular role should not be considered to be senior to another role.
- ❑ Rather, consider that roles define the user’s responsibilities within the site.

Content Management Systems

User roles and responsibilities

Summary of Roles

Super Admin – somebody with access to the site network administration features and all other features.

Administrator (*slug: 'administrator'*) – somebody who has access to all the administration features within a single site.

Editor (*slug: 'editor'*) – somebody who can publish and manage posts including the posts of other users.

Author (*slug: 'author'*) – somebody who can publish and manage their own posts.

Content Management Systems

User roles and responsibilities

Contributor (slug: 'contributor') – somebody who can write and manage their own posts but cannot publish them.

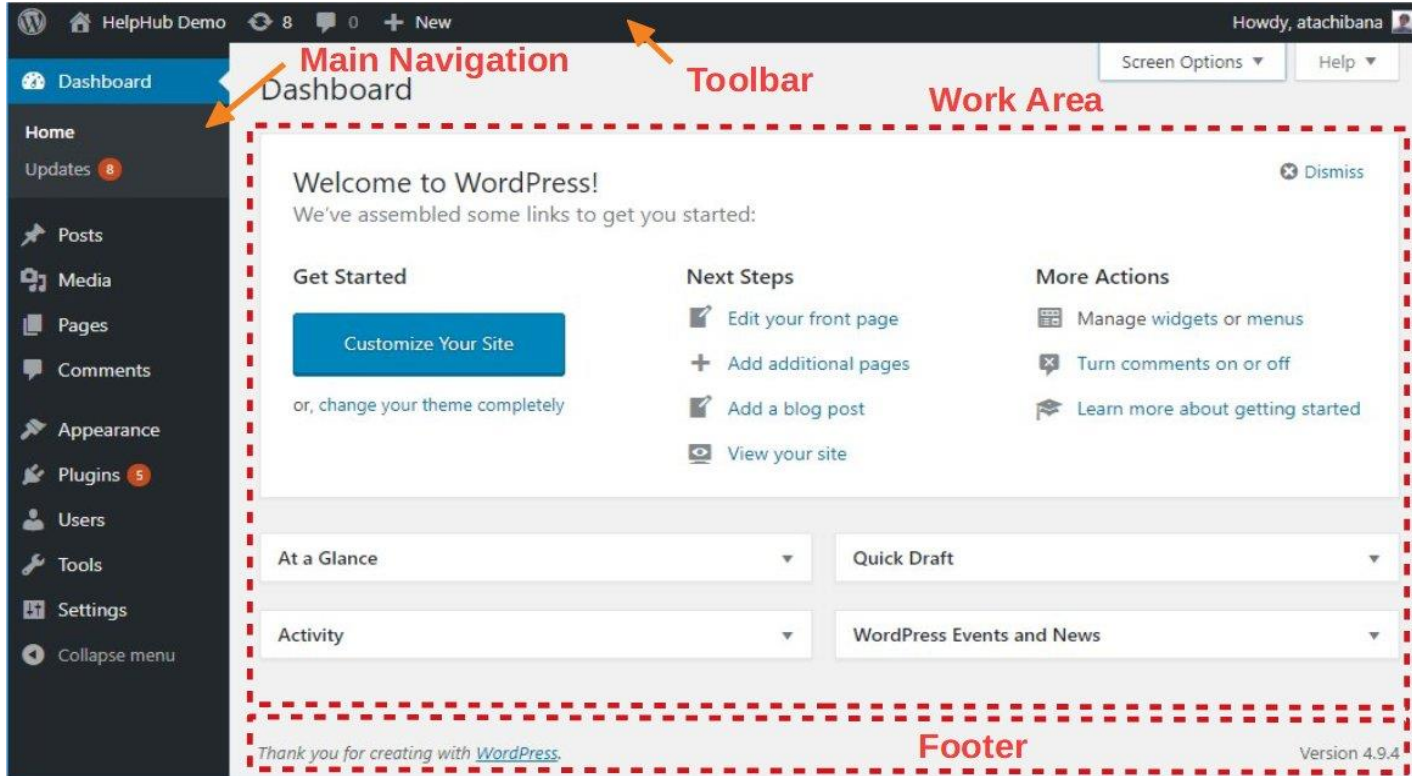

Subscriber (slug: 'subscriber') – somebody who can only manage their profile.

Upon installing WordPress, an Administrator account is automatically created.

The default role for new users can be set in [Administration Screens](#) > [Settings](#) > [General](#).

Content Management Systems

Administrator screen - Sections

The screenshot displays the WordPress Administrator Dashboard. The interface is divided into several key sections, each highlighted with a red dashed border and a red label:

- Main Navigation:** Located on the left side, it includes a dark sidebar with menu items: Dashboard, Home, Updates (8), Posts, Media, Pages, Comments, Appearance, Plugins (5), Users, Tools, Settings, and Collapse menu.
- Toolbar:** Located at the top of the dashboard area, it includes a dark header with the WordPress logo, HelpHub Demo, 8 updates, 0 comments, a New button, and a user profile dropdown for 'Howdy, atachibana'.
- Work Area:** The central area of the dashboard, containing a 'Welcome to WordPress!' message, a 'Dismiss' button, and three columns of links: 'Get Started' (Customize Your Site), 'Next Steps' (Edit your front page, Add additional pages, Add a blog post, View your site), and 'More Actions' (Manage widgets or menus, Turn comments on or off, Learn more about getting started).
- Footer:** Located at the bottom of the dashboard area, it includes a 'Thank you for creating with WordPress.' message and the version number 'Version 4.9.4'.

Additional elements visible in the screenshot include a 'Screen Options' dropdown and a 'Help' dropdown in the top right corner, and a 'Quick Draft' button in the bottom right corner of the Work Area.

THANK YOU
